modern scientific developments
to combine comfort with
protection inside the
Cy-Co-LITE Helmets"

Charles Hagemeyer

RAWLINGS DIRECTOR OF RESEARCH
AND ENGINEERING

Modern developments in plastic foam materials have allowed us to develop a special double-layer padding for football helmets. This double-layer of foam permits the padding to do a double task. The slim outer layer (see illustration) which we call Super Aire-Guard Vinyl compresses slowly, absorbing and reducing shock force by spreading it. The inner layer is leather covered foam rubber. It cushions the head, allows the helmet to fit well. In football contact, the shock force cannot be eliminated. It must be absorbed. Our double-layer padding offers the finest contact protection possible in a football helmet. Try it and see.

A Built-in ventilation channels for comfort.

B Combination, double-layer padding for safety.

C Padding plus suspension—removed quickly, easily.

D Cy-Co-LITE shell—the strongest helmet material available.

E Padded Edge binding at contact points on the shell.

F Perspiration-resistant lining for longer life.

G Positive snapping for firmer anchorage.

H Non-slip chin straps hold helmet firmly in position.

Something old, something Newell

THE difference between the mendacious, money-grubbing shamateur and the genuine amateur athlete was lucidly revealed in two recent articles in *Sports Illustrated*: "My Take-Home Pay as an Amateur Sprinter" by Mike Agostini, and "Idea of an Amateur" by Phil Coleman, the distance runner.

The Agostini squeal isn't worth dignifying with quotes. The Coleman article merits serious attention. Simply and honestly, without bathos, the Mid-Western distance star offers a trenchant brief for amateurism—telling exactly what he has gotten out of it.

In dollars and cents, it may not compare with the Agostini "take." But in the fuller, more meaningful sense of life, it is far more enriching. Coleman's philosophy is beautifully capsuled in his concluding paragraphs:

There is no special virtue in amateurism if the definition hinges only on whether or not the athlete is paid. The value of amateurism lies deeper. It is the value the Greeks recognized as lost when they discontinued the ancient Olympic Games.

Amateurism is a point of view, a state of mind. It is an attitude toward sport that recognizes it as something other than a profession, something other than a livelihood or a means of existence. Athletics has been for me a way of life, but it has not been a whole life; and it cannot be...

An amateur's commitment to sport is a qualified commitment, an acknowledgment that he will give his all only within certain restrictions. He will do his utmost in his two hours a days, knowing that he might be better if he spent eight hours or if he added weight lifting or he dropped spices from his diet or quit sleeping with his wife.

He strives to do his utmost within his limits but has the reservation that if he is not himself victorious this does not mean he is defeated. This is his creed, whether he is an amateur runner, boxer, painter or fisherman...

If Mike Agostini wants to get paid for his sport, I will let him... I do ask of the Mike Agostinis that they stop implying that because they do something, everybody does and insisting that because they do it, it's right.

These words have a dignified, noble lift to them. What a wholesome relief from those dingy public confessionals (paid for at top magazine rates) by all those shamateur runners, tennis players, and ex-college football players.

WHEN Pete Newell traded in his magnetic coaching board for an athletic director's portfolio last September, basketball lost one of its two or three most gifted, intelligent, and gracious practitioners. It may seem late in the game to be hooking up a hosanna, but we just heard a story about him that has forced us to shoot.

It happened at the Spalding-Sports Illustrated Clinic in Monticello, N. Y., last June. One of our buddies—a diabolically shrewd high school coach—descended upon the seminar armed with a real brain-buster: *If you have a team with only one good ball-player, what do you do when the opponents throw a box-and-one against you?*

Our friend lobbed it at one big coach after another, and no one could tap it in for a basket. Some gave it the once-over lightly; others threw up a smoke screen to conceal their perplexity; and a few suddenly found engagements that needed their immediate attention.

Then it came Pete's turn. He sat my friend down. "All right," he said, "tell me about your good man. How tall is he? What can he do? What about the other kids? Do any of them have any particular skills? What have you been doing against the box-and-one so far?" etc.

Pete then carefully detailed all the possibilities open to the offensive team!

Our friend was profoundly im-

pressed. Later that noon he again put the press on the California coach. "Pete," he said, "I have an enormous favor to ask of you. There are 15 New York City basketball coaches at the Clinic, who are very anxious to hear you lecture. Unfortunately you're not going on until tomorrow afternoon, and all of us have to be back at school by then. I know I'm asking a lot, but could you possibly give us the lecture tomorrow morning?"

Pete didn't hesitate a moment. He'd be happy to do it, he said. Next morning he showed up at the room where the 15 coaches had assembled. He showed the film of the game in which California stopped Oscar Robertson, keenly and thoroughly analyzed the defense that did it, then gave the rest of his regular lecture. By the time he finished, about 150 other coaches had jammed into the room and were listening enthralled.

"It was the nicest thing he could have done for us," our friend mused. "I hope Pete knows how much we appreciated it and what we think of him. He's the greatest. You'd think, with his record, he'd be dogmatic about his theories. But he showed a deep understanding of our problems."

"Remember," he kept saying, "this is the way I did this (or that) thing because of the personnel I had. You may have to do it another way because you have different kinds of kids."

"Pete was just fabulous—all brains and class. I now know exactly what kind of coach I want to be—exactly like Pete Newell."

As you can see, Pete has opened a Newell Frontier in basketball coaching.

WE WERE cooing happily over George Dixon's syndicated column, "Washington Scene," on February 20, when wham! bam! alla gazam! two words jumped out of the last paragraph that practically

Defensive Backfield Drills

By **DAVE HART**, Coach, Johnstown (Pa.) High School

OVER the years we've collected many practice devices with which coaches teach pass defense. We've put them together, added a few of our own, and have come up with a pretty sound teaching program.

It has been said that, "There's no perfect pass defense." Though we don't particularly care to begin our selling and teaching on such a premise, we don't mind if our kids hear it said as such. We do, however, want to instill the philosophy that the zone defense most closely achieves perfection against passes.

We also want to sell our lads on such ideas as: (1) the long pass must never be completed for a touchdown, (2) the ball belongs to anyone when it's in the air, (3) you must intercept one out of every six passes thrown, and (4) completed passes must be held to a very low yardage.

We teach our defenders to play the field, not the receivers. Our basic strategy is to play the field, the passer, the ball, and, last, the receiver (with split vision).

A good pass defender must have

a genuine desire to play pass defense, and must work hard to master the various techniques.

These techniques are: (1) playing the field—his zone, (2) reacting and changing direction when the ball is thrown, (3) playing the ball, (4) intercepting the ball at the highest point, (5) playing through the receiver to the ball if necessary, (6) eliminating the intended receiver with a block once the pass is intercepted.

We believe that our drills help to improve these skills and the players' confidence in intercepting passes.

These drills may be used to teach one or a series of techniques at the same time. We like to vary our methods because the players may tire of constant repetition. A variety of drills and the element of change create greater interest and constant challenge, sustaining squad morale throughout the practice sessions.

After calisthenics, sled work, and agility drills, we embark on the various individual and group drills with our pass defensive men. Our practice schedule calls for a certain amount of time with two inter-

charging groups, and these drills are usually repeated with each group by our defensive backfield coach.

The drills we use follow. (Walk through them first. Go slow.)

1. Running the Line (Body Reaction Drill), **Diag. 1.**

Objective: To teach them to run downfield full speed—to react and turn with agility and body balance while watching the passer.

Procedure: Coach with ball stands on yard marker at one side of field—players line up and pedal backwards on line, watching passing action of coach. They turn (left or right) on pointed direction of ball.

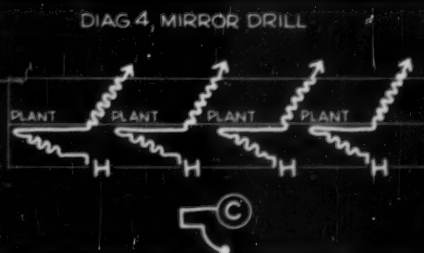

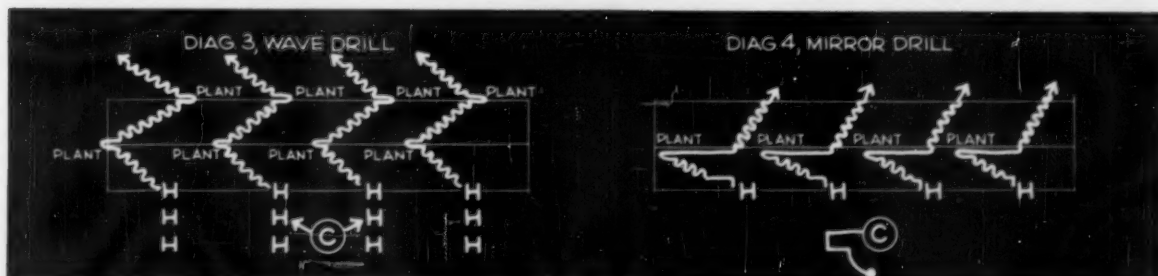

Coaching Points: Start from basic position. Stay on line. React and change direction by crossing over with knees bent slightly and tail low. Watch passer. Don't turn back on ball.

To obtain more than one learning skill, you may mix this interception drill with the technique in **Diag. 2.** Coach passes ball to defender who catches it at highest point, coming forward with thumbs inward. As players begin to acquire proper technique and confidence, the interception distance can be widened.

2. Wave Drill (Body Reaction Drill), **Diag. 3.**

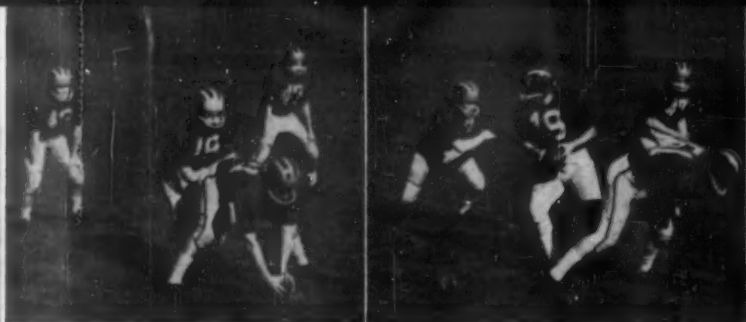

Objective: React with proper balance and planting procedure to movement of ball.

(Continued on page 25)

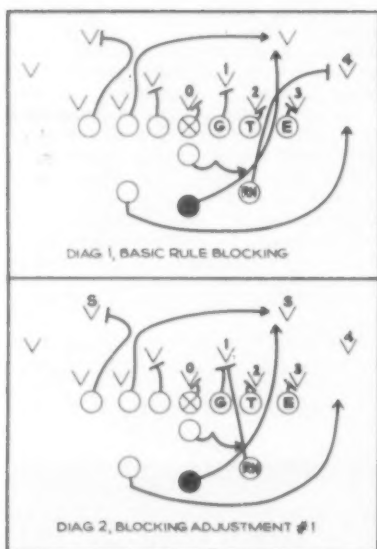

WINGED T COUNTER PLAY

Upon receiving the ball from center, the qb reverse-pivots. As the fb passes him, he bends his path toward the lh's original spot. He's ready to hand off inside (to the lh) with his right hand the instant the fb passes him. Note, in picture 2, how the lh rocks his weight on his left foot and head-fakes to his right before stepping off with his right foot.

Blocking Adjustments for Outside Belly Series

DIAG 1, BASIC RULE BLOCKING

DIAG 2, BLOCKING ADJUSTMENT #1

YOUR basic running attack always seems to look pretty good on paper, and you wonder how the defense will be able to contain such a deceptive, hard-hitting formula.

But once the game starts, your wonderment often changes to dismay. Somehow the defense will find ways of bolixing your blocking assignments at the critical point of attack. And if you can't adjust your assignments, you're lost.

In short, you must be able to vary your blocking patterns. That's what we've done with the basic play of our outside belly series—the fullback off-tackle play. By utilizing a very simple set of adjustments off our basic rule blocking, we're able to block the play in many ways, thus providing a good deal of trouble for the defense.

These blocking adjustments are an absolute necessity. The fullback off-tackle play *must* be successful for your outside belly series to go.

Since all adjustments concern only the active side of the line—the critical point of attack—we shall confine our basic blocking rules to this side.

Our basic rule blocking comprises the simple 0, 1, 2, 3, 4 method popularized by Jim Tatum and Warren Giese at Maryland in the early 1950's. On the active side of the play, the blocking rules are as follows (see **Diag. 1**):

Center. Block (O), who's the lineman or linebacker playing head-on you. If there's no (O) man, as in a loose-6 defense, then fire-out straight ahead a few yards and turn to the off-side and look for a linebacker coming in pursuit.

Active Side Guard. Block (1), who's the first defensive lineman (or linebacker) to your side of the ball, not counting the (O) man.

Active Side Tackle. Block (2), who's the second defensive lineman (or linebacker) to your side of the ball, not counting (O).

Active Side End. Block (3), who's the third defensive lineman (or linebacker) to your side of the ball, not counting (O).

Active Side Halfback. Block (4), who's the fourth defensive lineman (or linebacker) to your side of the ball, not counting (O).

We make any adjustment needed

By **PETE DYER**

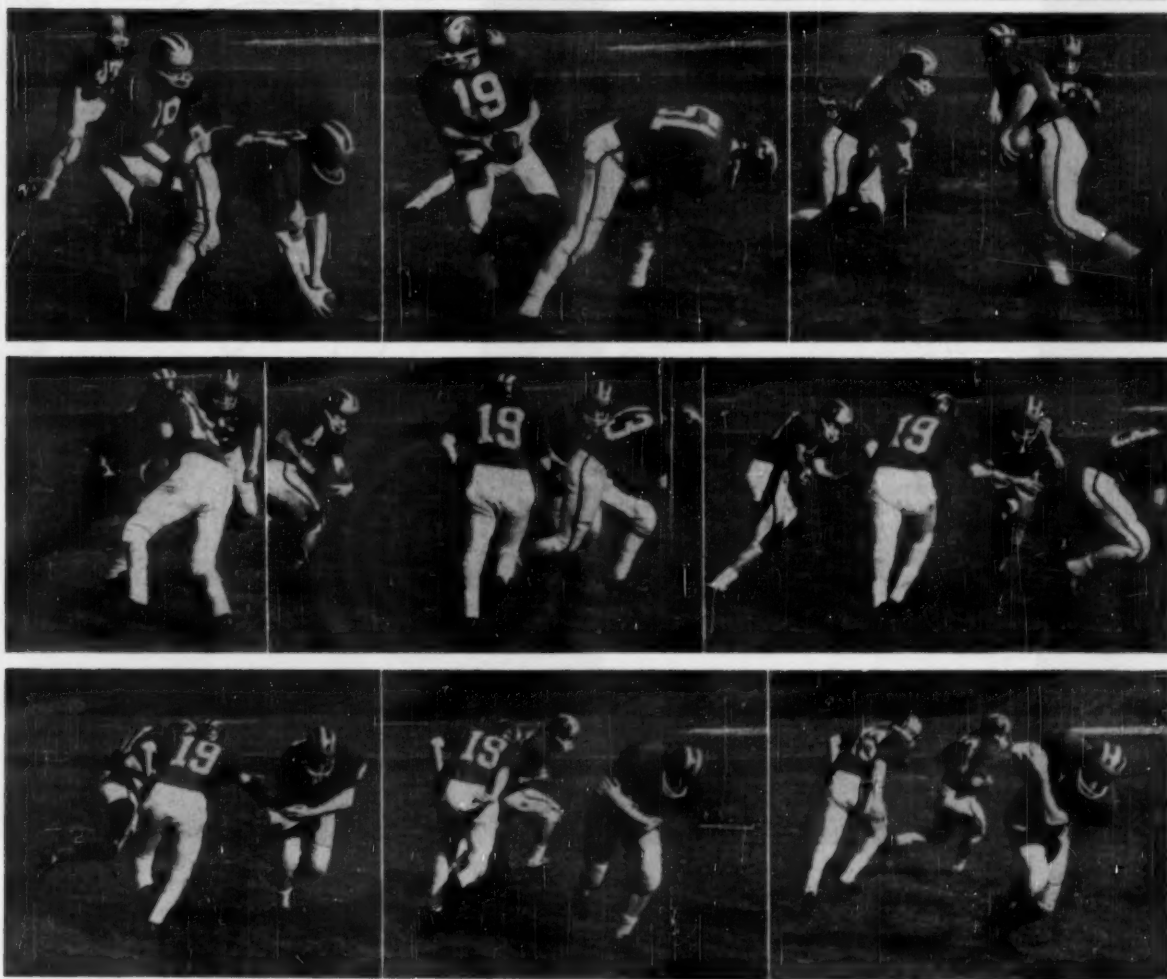

Coach, Dobbs Ferry (N. Y.) H. S.

WINGED T COUNTER BOOTLEG

Designed to look like the counter, the qb pivots as before, placing the ball on his pelvis with his left hand. He snaps a right-hand fake to the lh,

allowing his right hand to drag after him, meanwhile sliding the ball to his left hip to conceal it. He looks over his shoulder at the lh, as he follows the rh (who left in motion) to the outside at a depth of five yards.

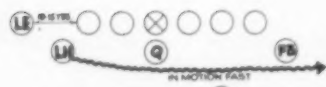

from this simple basic blocking rule. Now let's examine the set of blocking adjustments that have proved most helpful to us in our outside belly series. All adjustments will be described against the Oklahoma 5-4-2 defense, and to the right side of the line only.

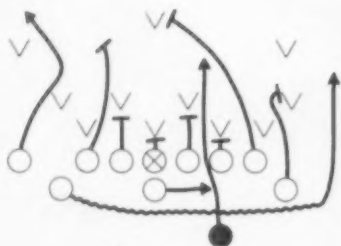

Blocking Adjustment # 1 (Diag. 2). The right halfback double-teams the (1) man along with the offensive guard, while all other linemen execute their basic rule block. This adjustment offers a wonderful means of cutting off the defensive pursuit of the active side defensive interior

linebacker. This particular defensive player can, at times, be very tough to keep out of the fullback's running lane when regular rule blocking is utilized.

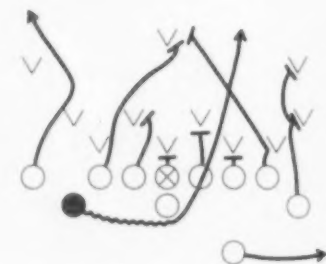

This can be due to two factors. First, the linebacker secures outside

By **HERB APPENZELLER**, Coach, Guilford College (N. C.)

Flying Wing Offense

TWO years ago we found our opponents stacking their defenses to stop our inside attack. This was due in part to our fine fullback and also to a lack of exceptional speed by our halfbacks.

Late in the season our coaching staff decided to vary our attack to try to develop an outside attack. By nature of the formation we called this off-shoot of our regular T our "50 Series" or "Flying Wing" offense.

The results have been rewarding from an offensive standpoint. With the same personnel as the previous year, we scored the second highest point total in the school's long history! We found we could use our basic plays without any significant changes in the blocking assignments of our linemen. This "flying wing" provided the defense with several problems that enabled us to capitalize effectively on their adjustments to our new formation.

Diag. 1 illustrates our "flying wing" offensive setup. We use our fastest back at right half and our best blockers at fullback and left fullback. On the command down,

our left halfback moves laterally as fast as he can toward the fullback. We vary our left end's split according to the coverage by the defensive halfback.

Diag. 2 shows our bread-and-butter play (54 Hand-Off).

A GRADUATE of Wake Forest, currently working on his Ph.D. at the U. of North Carolina, Herb Appenzeller has enjoyed conspicuous coaching success on both the high school and college levels in North Carolina. In his two years at Rolesville High, he produced two conference champs. In his next two years at Wakelon High, he produced teams with outstanding offensive records. Then came a five-year term at Chowan Jr. College, during which he produced an unbeaten team, a team that set a school scoring record (279), and played in five bowl games. Since 1956 he has been coaching the high-scoring teams at Guilford College.

Diag. 3 delineates our 54 Hand-Off to the left half which hits so quickly it often catches the defense off balance. Our left half looks for daylight, while our linemen block straight ahead.

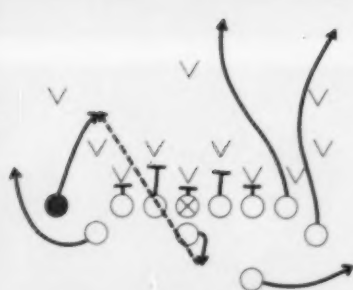

Diag. 4 illustrates the quick-pitch long gainer that enables us to get outside quickly. We use a halfback pass (**Diag. 12**) whenever the defensive halfback comes up too fast.

In **Diags. 5-6** we use both a quick trap and a delayed trap to keep the defense from pursuing too fast. We've found the delayed trap to be more effective than the quick trap. Our quarterback sneak (**Diag. 7**) has been effective off this formation.

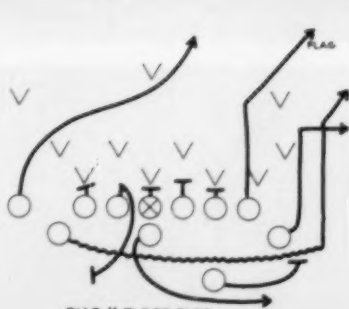

Diags. 8-9 are counter plays that are run quick to the weak side against rotation or overshifted defenses.

Diags. 10-11 are passes we employ from our "flying wing" formation. In **Diag. 10** we like to hit our LE if he's open, but will fake to him and hit our left halfback in the flat if the end is covered.

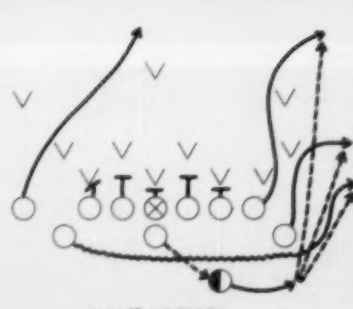

We feel sure any coach can improve his offense with a spicing of flying wing.

DIAG 10, QUICK LOOK-IN PASS

DIAG 11, FLOOD PASS

DIAG 12, HB PASS

By **BILL WALSH**, Assistant Coach, University of California

Multi-Stage Passing

SINCE a perfect defensive reaction would theoretically stop any attempted offensive maneuver, it's up to the offense to somehow exploit this so-called perfect reaction. The idea is to make any defensive reaction a mistake.

That, of course, takes some doing. But it can be done, by developing maneuvers that unfold *after* the ball has been put into play, according to the defensive reaction to their keys or specific duties.

A maneuver of this type could be operated from a basic pattern that offers more than one opportunity to the attacking team. An initial maneuver could be attempted. If its success is doubted, another is immediately launched. And possibly if this doesn't show promise, another could be initiated.

This would actually add one or more stages to the original maneuver. A sequence of this nature

could be termed a multi-stage maneuver.

My first article last month dealt with the evolution of such an attack and the two stages of a roll-out sequence. Now let's proceed to the next multi-stage sequence.

Drop-Back Pass Sequence (three-stage). This sequence is designed specifically as a passing maneuver. It's a three-stage affair that attempts to bring pressure upon every defender. The key to its success lies obviously in the timing and coordination necessary to develop each stage effectively.

The first stage is the break-in pass, which is attempted from a spot one yard behind the center. The quarterback leaps and attempts to hit one of three possible receivers—**Diag. 1**. Note the problem the defensive linebacker has in protecting his area, with two receivers breaking into it at different intervals.

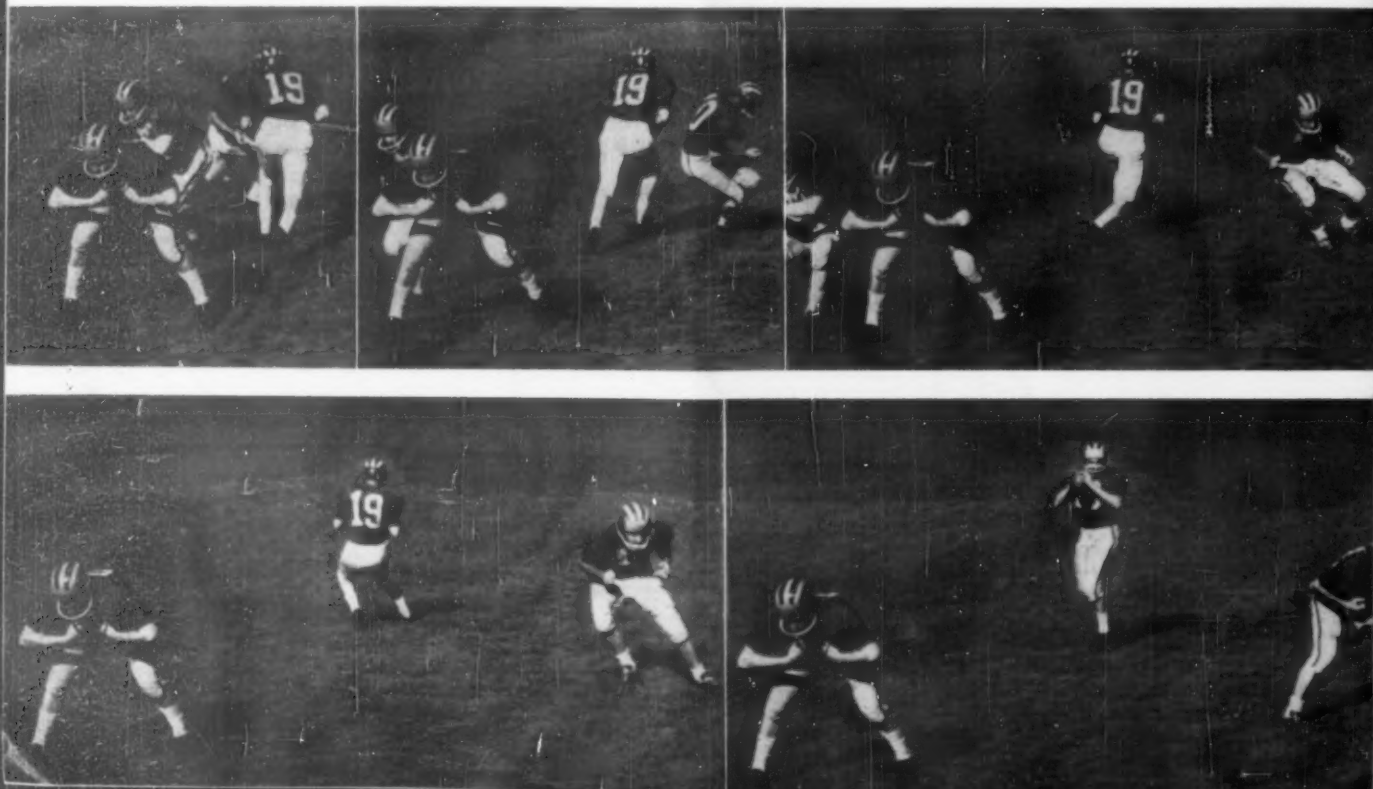

It isn't necessary to force this stage. If the defenders have reacted adequately, the second or third stages

should automatically open. The quarterback should pick his receiver according to defensive positioning before the ball is put into play. He then should jump and hit the receiver as he breaks free.

If the receiver chosen isn't free, the quarterback must immediately retreat to the normal passing point five to six yards deep. He mustn't linger and force the first stage. From this position, he attempts to complete the second stage.

The three receivers immediately convert their original first-stage patterns into those illustrated in **Diag. 2**. The left end breaks back toward the sideline six to eight yards deep, the right end cuts into the center secondary at top speed, and the slot back cuts back to the outside into the defensive left secondary. If reaction to the first stage is complete, these second-stage patterns should free at least one receiver.

Note the timing that's necessary with one receiver breaking into a zone just as another leaves. The de-

(Part 2)

fenders in the secondary will have to adjust with perfect team work and coordination to cover these patterns throughout the second stage. **Diag. 1** offers probable defensive reactions.

The quarterback must throw quickly if pressure develops. This probably will occur because of the time taken for the first stage. As he observes the downfield action, he must be aware of this pressure. If an open receiver isn't found immediately, the quarterback should begin retreating. This is the third stage.

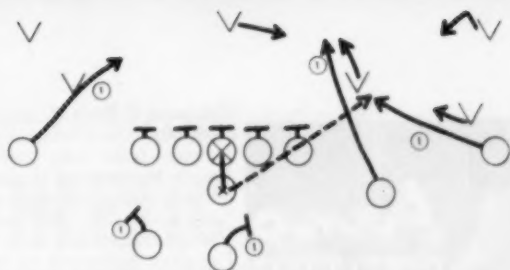

With defensive linemen penetrating toward him, he retreats into a screen pass position. From this point, he attempts to pass to either set back. These back position themselves after acting as blockers for the first and second stages. **Diag. 3** illustrates this third stage, while **Diag. 4** offers the entire sequence.

Individual assignments are as follows:

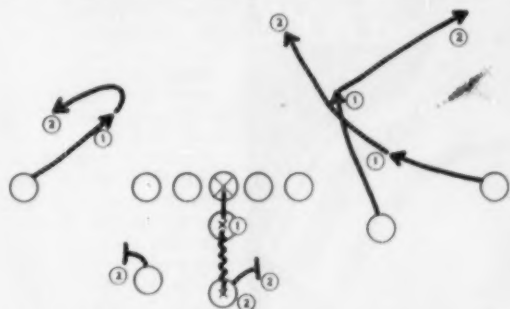

Left End: Execute break-in pattern. If the quarterback only simulates this stage, cut back to the sideline as in-

4 DROP-BACK PASS

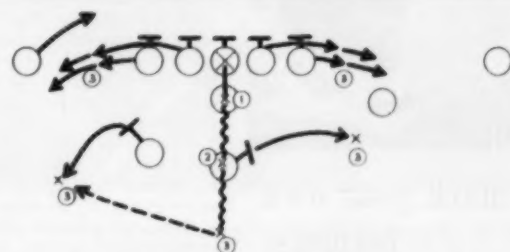

A good drop-back passing pattern from the Winged T. The quarterback fakes to the fullback, who drives into the line and checks. Then the quarterback fakes to the wingback coming around, who takes a couple of steps and then stops to protect the passer's left side. Upon his fifth step back, the quarterback stops and turns, bringing the ball up nicely with both hands. He looks directly forward for deception, then steps left to hit his receiver down that side.

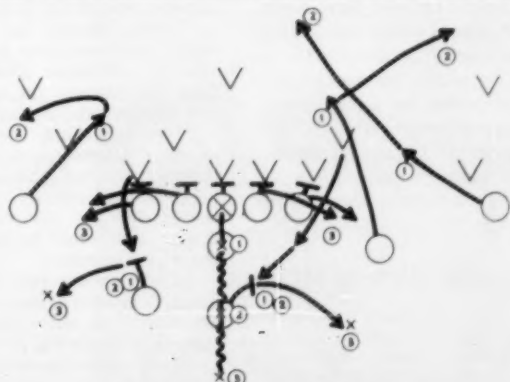

DIAG 1, FIRST STAGE OF DROP-BACK SEQUENCE

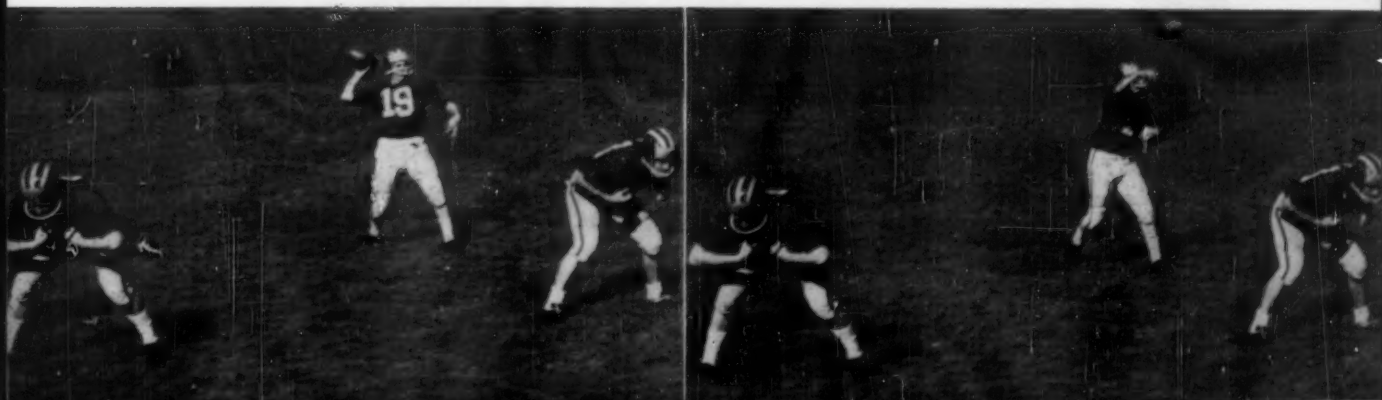

DIAG 2, SECOND STAGE OF DROP-BACK SEQUENCE

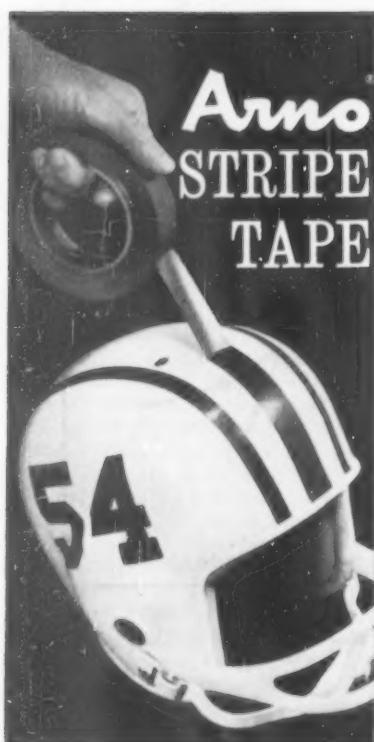

DIAG 3, THIRD STAGE OF DROP-BACK SEQUENCE

MANUFACTURERS AGENTS WANTED
FOR SOME SELECTED AREAS

dictated in **Diag. 2**. Be prepared to block for the third stage. Attempt to run away from any covering defended with the second stage pattern.

Right End: Execute a shallow break-in maneuver. If this maneuver is simulated, break into the center secondary prepared to receive the ball at any time.

Slot Back: Execute a diagonal break-in pattern as illustrated. If the first stage is simulated, break back into the defensive left secondary. The cut must be sharp and with all possible speed. Attempt to run away from a three-deep safety and the defending halfback. The ball can be thrown at any time.

Interior Line (Tackle to Tackle): Wait in a low balanced stance at the line of scrimmage. As defenders pressure, meet them aggressively and give ground reluctantly. Defenders cannot be permitted to penetrate for the first stage to operate effectively. Contact must be maintained, if possible defenders should be driven toward the middle and piled up. Tackles may retreat up to two yards as time elapses.

In offering assignments of this nature, it's hoped defenders can be held up to four or five seconds. After this, the third stage should develop naturally. An actual cup of protective blocking should exist only for a moment. These offensive linemen must be aware of the impending screen maneuver and move laterally to act as blockers if possible.

Remaining Backs (Set Backs): Turn immediately to the outside and aggressively block any penetrating defender for a count of four. At this instant, break to a position four to six yards behind the line of scrimmage and from four to six yards outside the offensive tackle. From here, face the passer, prepared to receive the delayed third-stage pass.

After receiving the pass, proceed at own discretion watching for potential blocking linemen. The actions of these individuals call for timing; the move to the outside for the screen pass must be made at exactly the right moment.

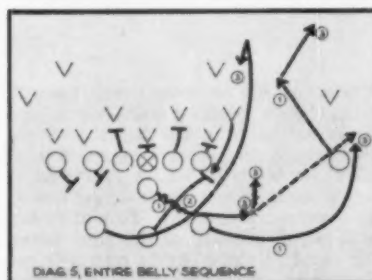

Quarterback: Immediately watch break-in pattern, jump and attempt to hit a receiver chosen according to defensive alignment. If this receiver is covered, retreat to the normal passing position and attempt the deep pass or sideline pattern to the left end. If pressure develops too quickly, retreat until the delayed patterns of the halfbacks open; loft the ball to either.

The quarterback, in most instances, should have a good idea which stage is best suited for the situation at hand. This is the most difficult aspect of this sequence—the quarterback's ability to execute each stage, plus the ability to make the decision of premium importance. If a coach considered this an important part of his offense, he'd have to design his entire passing offense around it and/or variations of it.

Belly Run-Pass Sequence. This is another sequence designed to pressure the defenders outside the offen-

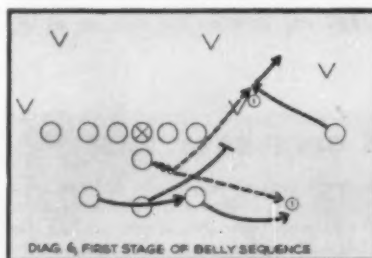

sive tackle. It consists of three stages, each designed to exploit defensive commitment to the others.

The first stage is a combination break-in pass and quick toss to the split-side halfback; the second stage is the far halfback driving outside tackle in a belly type maneuver; and the third stage is a roll-out action by the quarterback in which he either passes to receivers breaking deep or keeps the ball for a running thrust.

Diag. 5 illustrates the entire sequence. Note the activity to the side being attacked; the defenders in this area are brought under extreme pressure. Normally, there are only two defenders located here. If offensive manipulation is competent, they cannot meet this sequence without assistance. And, of course, assistance will weaken another area.

The first stage is, to a large extent, decided before the ball is put into play. If defensive alignment doesn't adequately cover the break-in pass or quick toss, they can be executed with almost assured success.

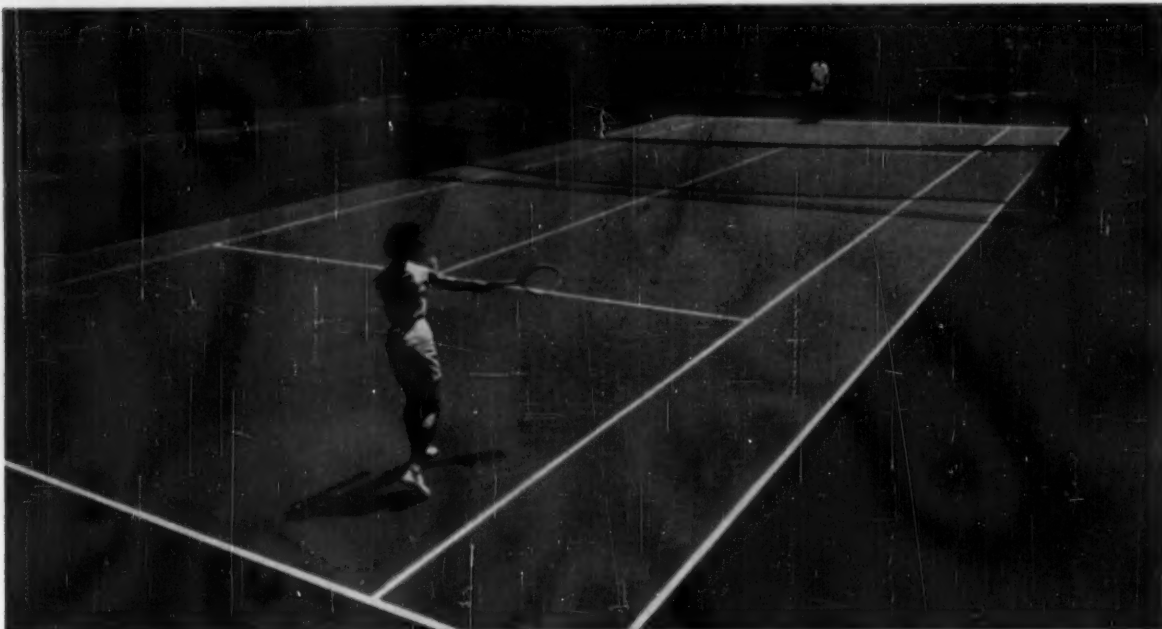

Diag. 6 offers poor defensive coverage. It's extremely difficult for the outside linebacker (wing) to meet both first-stage alternatives. If commitment is to the inside and the pass, the quick toss should be free. If commitment is to the inside and the pass, the quick toss, the break-in pass will automatically open. The decision should be made before or a split second after the ball is centered.

The second stage, or off-tackle thrust, is utilized first if the original defensive alignment is suited for it, and second if defensive commitment to the first stage is to the inside. Also, if the wing penetrates excessively to the outside (straight across) this maneuver should show success.

Diag. 7 offers this stage. In this situation the second stage is employed because of the defensive alignment and too much penetration.

The third stage should enjoy success.
(Concluded on page 42)

The Trend is to Laykold Products for ALL-WEATHER ATHLETIC SURFACING

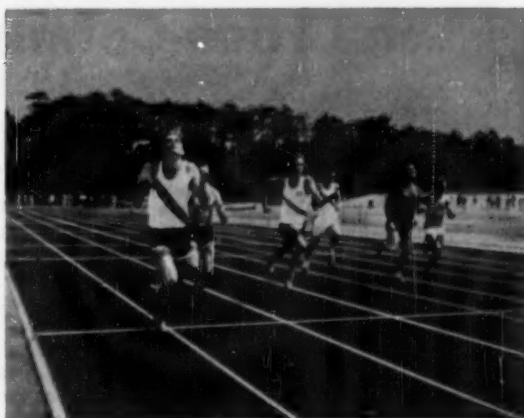

Laykold & Grasstex Tennis Courts The most popular* all-weather courts in the world — and for these good reasons:

- Reasonable initial cost; minimum upkeep
- Smooth; true-plane; fast drain
- Colorful—black, red, green—or "Two-Tone"
- Durable! With a squeegee-seal every few years courts last indefinitely.

*A survey of schools and universities shows that more than 55% of "All-Weather Asphalt Composition Courts" in service are Laykold or Grasstex types.

Grasstex Running Tracks The answer to every track coach's prayer! Smooth, resilient, fast-draining. Ends "weather worries." Reasonable initial cost; minimum maintenance. Also, Grasstex strips and runways for field events. Over 50 schools, colleges and universities now enjoy all-weather facilities.

And...Walk-Top Surfacing for Play Areas For smooth, non-abrasive, grit-free outdoor basketball courts, playgrounds, assembly areas, walks, etc., Walk-Top is the choice of schools from coast-to-coast. Millions of square feet of playgrounds have been Walk-Top surfaced in Los Angeles alone! Saves wear and tear on clothes, shoes, equipment.

Schools in all parts of the country have made Laykold products their first choice for more than 30 years. You

Training New Recruits in Cross-Country

MANY a cross-country coach has been confronted with the dilemma of starting a new season with few if any holdovers around whom to form a representative team. What can he do under these circumstances? Very little, other than settling down to a nose-to-the-grindstone program, calling on all his ingenuity and know-how.

First off, he'll have to beat the bushes for new recruits. The virtues of cross-country must be extolled to the utmost throughout the width and breadth of the school.

Articles in the student newspapers, posters, talks at student assemblies, movies of the Olympics, personal contacts with students in the physical education classes, a drive by the present team members to interest others, talks by other teachers, spot announcements during the school day by megaphone

or public address system, personal appearances by outstanding distance runners—all these are tried-and-true devices that should bring out some new candidates.

The other source of raw material is the track squad. Too often, the cross-country candidates are solicited only from the ranks of the middle distance and distance runners. But seek among the others and you may find an occasional diamond in the rough. There's no reason why all but possibly a few of the really heavily set weight men cannot be a potential source of cross-country material—and even they can profit from cross-country training, regardless of whether they make the squad or not.

Selling cross-country training to a group of trackmen disinterested in anything but their own specialty shouldn't prove to be too much of a

chore, especially if the cross-country coach doubles as the track mentor. Nowadays, world records are being broken ad infinitum because of the revolutionary training methods that make it possible for athletes to carry their speed over greater distances. This means that endurance is being developed to higher levels.

All of the coaches who've been successful in producing champions agree that to improve endurance an athlete must go through the proper combination of work-outs that involve building-up exercises, repeated short-distance running, and over-distance training. And most of these coaches also agree that the over-distance training should come either out of season or during the early part of the season. Since the training period in the spring isn't sufficiently long to permit this, the fall would be the logical time to work on building stamina.

In those schools where the cross-country and track coaching is handled by different individuals, a selling job may be necessary in order to get the trackmen out for cross-country. The merits of endurance training should be cited, with particular stress on the methods of the Russians and the Australians to show

COACHES REPORT: MACGREGOR E700 HELMET

"No neck injuries and not a single complaint on helmets for the first time in my coaching career." —

Bill Murray, head football coach, Duke University

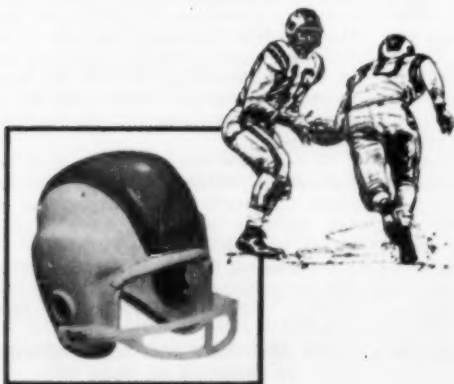

"I think the E700 series is the answer to all coaches' problems when it comes to protection, comfort, durability and all around use."

This statement by Bill Murray, veteran of 22 years in big-time college coaching, is typical of comments from college and high school coaches everywhere. The E700 series is that good. And that safe. Reinforced Cycolac shell . . . lightest and strongest in the game; Geodetic* crown suspension; and Absorblo** padding . . . all MacGregor exclusives . . . make the E700 the lightest and safest helmet in today's bruising game. The Absorblo** crown panel, giving the appearance of an Apache haircut, found extensive use last year—provides extra protection to wearer and opponent alike.

The entire E700 series is built to cradle the head, soak up shock of both head-on and angle blows. MacGregor E705 has Geodetic crown suspension nylon web; E70A features Absorblo crown suspension—each provides the most protection you can give your players against head and neck injuries. As Bill Murray says, E700 series is the answer to any coach's problems. Put your team in the helmets cheered by coaches everywhere as the greatest in the game. See your MacGregor dealer today.

how far and how quickly they've come in developing record-breaking athletes.

The track coach should be impressed with the idea that the track man who's idle in the fall is the one whose conditioning and development will suffer in the spring. It may be well to indicate that you can alleviate the track coach's load by keeping active the squad members who'd otherwise be getting soft through inactivity.

Once the cross-country coach has marshaled his forces, such as they are, he's ready to go to work. Under the conditions that prevail, he should proceed as if he had two separate squads—one of beginners, and this would include the recruits from the track team, and the other of his experienced cross-country runners.

Both groups should be trained as separate entities. This is all the more necessary since the track-team members are actually participating in endurance training and aren't out for cross-country—at least that's what the sly fox of a cross-country coach would have them believe.

Handling newcomers in cross-country calls for the use of a modicum of applied psychology and TLC (Tender Loving Care). First and foremost, it's important to build up the confidence of these neophytes. This can be done by arranging the work-outs in a subtly graduated manner—increasing the distances so gradually as to obviate the possibility of anyone questioning his ability to perform the assigned unit of work.

At no time during the early training period should the work-out be such that it cannot be completed. Failure to complete any of these early assignments will do irreparable harm and destroy rather than develop confidence.

Another equally important aspect of the training program is the physical development of the beginners. This is part and parcel of the over-all goal of building confidence. It's accomplished by adding a careful program of calisthenics, since the building and strengthening of certain muscle groups are conducive to large scale improvement in performance.

Swimmers, boxers, wrestlers, baseball players, and many others have made tremendous strides in their sports by including building-up exercises in their training routine. Cross-country should be no exception, particularly with the type of group we're concerned with in this article.

Both the running and the calisthenics have to be carefully graded in order to accomplish their aim. As for the calisthenics, there are many possibilities. No doubt, each coach will have his own theories along these lines and will be able to devise combinations in line with his thinking. Bending, stretching, twisting, and leg, arm, and trunk lifting and flexing should all be worked into the sequences.

Remembering that we're dealing with a group that has to be handled carefully, these exercises should be few in number and moderate in severity for the first few days of practice, then ever so gradually increased after the initial period of soreness has disappeared.

As a matter of fact, soreness can be prevented by limiting the calisthenics during the first four days to a maximum of five minutes, and restricting the running as will be recommended later on.

Exercises with weights, or their equivalent, should also be added to the calisthenics in ever-increasing doses. Muscle groups of extreme importance in running are those involving the use of the legs and abdomen. Arm exercises should also be included, although they needn't be emphasized as much as the leg and abdominal movements.

Weighted shoes can be secured at a nominal cost, and a barbell with adjustable weights is also a handy piece of equipment to have. If weights cannot be obtained, the students can work in pairs. By placing their hands on their partner's ankles or shoulders, they can provide the resistance needed for this type of activity.

MUSCLE-BUILDING EXERCISES

Following are some of the exercises that will aid in the muscle-building program:

With weighted shoes or in pairs with another student offering resistance:

1. From a supine position—single leg lift, double leg lift, single leg lift, and sidewise movement, both legs lifted and spread apart, flutter kick, single leg flex, double leg flex, bicycling movement.

2. From a prone position—single leg lift, single leg lift and and sidewise movement, double leg lift, both legs lifted and spread apart, flutter kick, single leg flex, double leg flex.

With barbell balanced on shoulders, behind the neck, holding with both hands:

1. Deep knee bends—down slowly and rise quickly.
2. Vertical jump and squat.
3. Toe rises.

The running portion of the conditioning program should be worked out very carefully. It's important that the first few work-outs be very light, not only to avoid muscle soreness but to avoid extending any of the boys to the point where they might fail to complete every step of the assigned running.

A schedule that satisfies this requirement, which will carry into the third or fourth week, depending on the number of practice sessions a week, is indicated below:

1st day—5 minutes of calisthenics; jog 100 yards; walk 100 yards. (Repeat until a total of 800 yards has been covered.)

2nd day—5 minutes of calisthenics;

Better game movies begin here...

You can have better training movies, save yourself work and avoid a lot of worry with three bits of information on this page.

First, pick a convenient laboratory from this list of approved processors for DuPont 930 and 931 16mm film. Then let them know you'll be using them regularly, so that they can check bus, train, mail connections to give you fast, reliable service throughout the season.

Second, fill out the coupon here, so that your photographers can enjoy "Member of the Team." This sound movie shows them how to get the critical action in a game, so that their movies become a better training tool for your team.

Third, order your season's supply of DuPont 930 and 931 16mm Rapid Reversal film, and you can be sure of getting the best possible pictures in good time to give your players every lesson from every game.

Better Things for Better Living...through Chemistry

This 16mm sound film will be sent completely without charge. Your only cost is return postage.

SLOT T

with Variations

COLUMBIA HIGH has successfully employed the Slot T as its basic offense for the past three seasons. A well-balanced attack has been developed by adapting five basic series. Since the blocking rules proved no more complicated than they were in our Tight T, our players made the adjustment easily. We found them to be very enthusiastic about the new formation.

The variations of the Slot T present many defensive problems for opposing coaches, since it's possible to run and pass from approximately 18 different formations. The defense must also be prepared to cover a much larger area.

The defense must be kept honest by developing: (1) a power series inside, (2) a quick pass, and (3) a strong outside attack.

Our Slot T offense employs a balanced line with the linemen using

a four-point stance. The splits of the interior linemen are constant, with the guards being 12 inches from the center, and the tackles 24 inches from the guards.

The offside end varies his distance 1 to 8 yards from the tackle, according to his assignment. The onside end is employed 1 yard off the line of scrimmage and 1 to 4 yards from the tackle in the slot. We feel it's advantageous to employ the end in the slot to make better use of his size and blocking ability.

A halfback or fullback is positioned on the line of scrimmage 8 to 12 yards from the tackle. The other back employs a three-point stance $3\frac{1}{2}$ yards behind the line, splitting the inside leg of the tackle. The deep back assumes a squared three-point stance 4 yards behind the center.

For simplicity in calling forma-

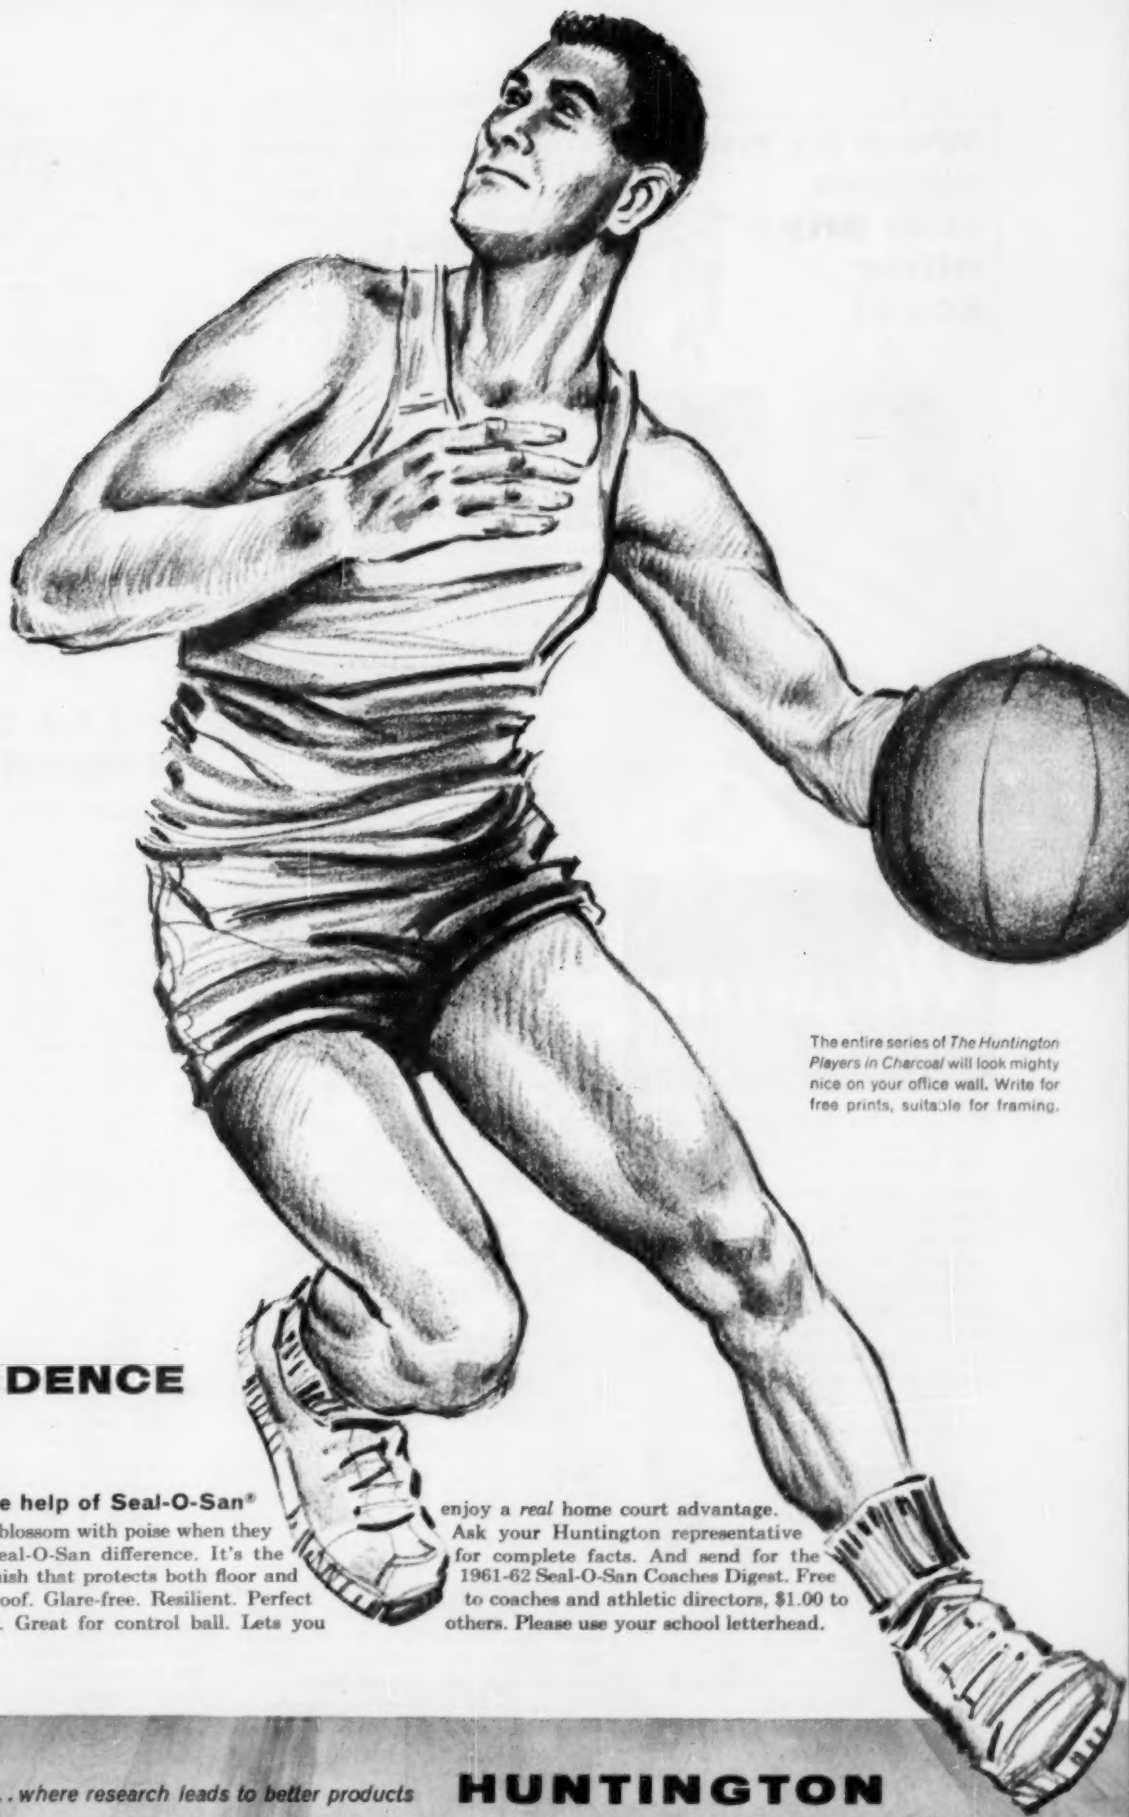

tion and plays, our ends and backs are lettered as shown in **Diag. 1**.

In our huddle, three calls are made by the quarterback: (1) formation, (2) play number, (3) snap number. The quarterback must be schooled in selecting the formations best suited for each offensive play.

It's possible to run all plays from more than one formation. **Diags. 1-3** illustrate the basic variations of the Slot T set up to the right, while **Diag. 4** shows the flexibility of the offside end, slot end, flanked back.

Our Option Series includes the quarterback sneak, halfback dive, option pass or run, and the quick pass. **Diag. 5** illustrates the quick pass from the Option Series. The defense must always be prepared to stop the Quick Pass, since it becomes an automatic when not covered properly.

The Inside Drive Series includes

The entire series of *The Huntington Players in Charcoal* will look mighty nice on your office wall. Write for free prints, suitable for framing.

CONFIDENCE

... built with the help of Seal-O-San®

Your boys will blossom with poise when they discover the Seal-O-San difference. It's the famous floor finish that protects both floor and players. Slip-proof. Glare-free. Resilient. Perfect for fast breaks. Great for control ball. Lets you

enjoy a *real* home court advantage.

Ask your Huntington representative for complete facts. And send for the 1961-62 Seal-O-San Coaches Digest. Free to coaches and athletic directors, \$1.00 to others. Please use your school letterhead.

for feet that compete!

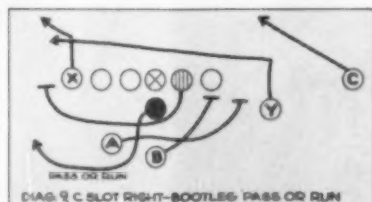

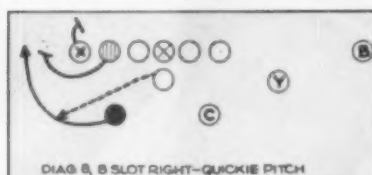

plays with the fullback and offside halfback carrying, fullback counter, and the action flood pass. A successful Drive Series will help keep the defense honest inside. The play with the fullback carrying over guard is illustrated in **Diag. 6**.

The Power Series has been devised to include fullback and halfback wedges, fullback off tackle, halfback sweep, reverse, and sweep pass. **Diag. 7** illustrates the halfback sweep, one of the most dependable plays from the Power Series.

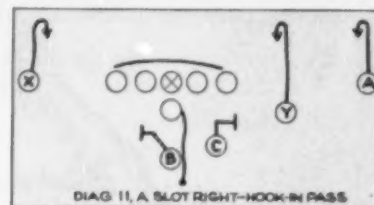

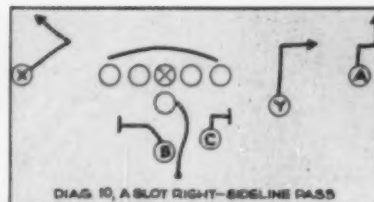

The Roll-Out Series has proven to be a very effective part of the Slot Offense. The important plays are the roll out, bootleg, quarterback keep, and quickie pitch to on-side halfback. The quickie pitch can be used as an automatic when the defense overshifts to the slot side.

The quickie pitch is illustrated in **Diag. 8**, while **Diag. 9** shows the bootleg option pass or run. The bootleg is also a very effective play against a defensive overshift.

The Straight-Back Pass Series has been devised to take full advantage of the offensive spread. The quarterback calls the pattern in the huddle. This Series also includes the draw, shovel pass, and screen pass.

A sideline pattern is shown in **Diag. 10**, while **Diag. 11** illustrates the hook-in pattern, a most effective pattern from the slot.

The Slot T has been used successfully by many professional teams for the past few years, and we've found that it can be easily adapted to high school football.

E. C. A. C. RULES FOR SCHOOLBOY ATHLETES

FRESHMEN entering an E. C. A. C. member college sometimes discover belatedly their ineligibility for varsity play because of breaches of the amateur code. *Ignorance of the rules doesn't make them any less binding.* Following are some of the more common pitfalls to avoid. An athlete will be ineligible for varsity competition in the E. C. A. C. if he:

1. Permits the use of his name or picture in commercial advertising.
2. Receives payment or accepts a gift or loan for playing, coaching, officiating, or teaching in any sport.
3. Signs a contract with a pro team even though he receives no payment or doesn't participate.
4. Receives payment from a pro team or plays in any sport with a pro team or with pro players.
5. Practices or tries out with a pro team even though he receives no expenses or payment therefor—without written permission from the appropriate athletic authority at his institution.
6. Receives compensation for a radio or TV appearance.
7. Accepts an award which doesn't comply with reasonable specifications as to value, type, and source.
8. Participates in an athletic contest under a false or assumed name.
9. Has ever been a member or played on any team in the American Soccer League, or played with a soccer team listing paid or pro players as teammates or opponents.

High school athletes know little or nothing about the eligibility codes of the various conferences, and thus are prone—unwittingly—to jeopardize their amateur standing or lose their eligibility for college competition. Coaches can render their boys a service by bringing these essential rules to their attention.

Buyer's Guide
to SPORTS EQUIPMENT
for High Schools
and Colleges

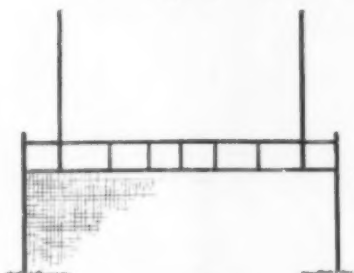

Buy the best and be satisfied—

AUSTIN FIELD & GYM EQUIPMENT

Carries a complete line of Linen Thread cord
and high quality steel nets for all sports

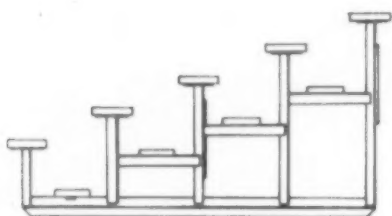

No. 55KB FOOTBALL GOAL POSTS. Can be set in flush sleeves and removed. Features new Tenzalok removable fitting supporting uprights and new welded bridge cross bar. Tenzalok fitting permits upright pipe to be dismantled for storage. Truss cross member eliminates bending of pipe.

No. 60C COMBINATION FOOTBALL-SOCCER GOAL. Can be set in flush sleeves and removed. Bridge type truss tubular frame. As soccer goal, netting is fastened to lower section of goal and two wings are slipped into sockets at either end of goal; heavy spike secures lower end of wing to ground. Virtually indestructible and comes in high school and college sizes.

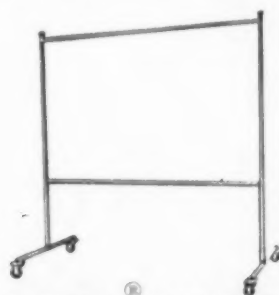

No. 129BV VINYL BASKETBALL GOAL NET. Not affected by climatic conditions and will not rust or rot like chain or cord. Has tensile strength of 3,000 pounds. No more "S" hook problems. Fastenings are of same material with great durability. Comes in any standard color.

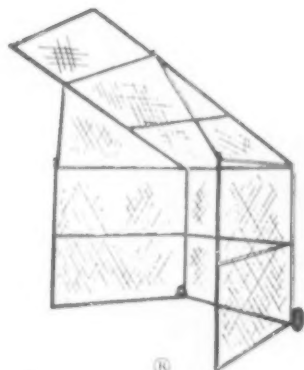

No. 5 PORTABLE BLEACHERS. Sturdiest made. Five-tier high, 12' sections, 2" x 2" x 3/16" welded angle construction, thoroughly braced. All-steel finished with cold zinc giving same protection to steel as galvanizing. Seat and footboards, 2" x 10" fir, treated with Wood-Life and finished with green deckpaint. Will seat 40 allowing 18" per person.

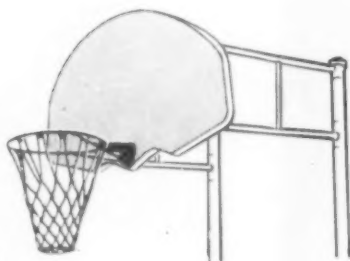

No. 45 PORTA-WELD MAT RACK. All-welded construction. Unit rolls on heavy rubber casters. Height, 6' 2", length, 120". Adjustable sliding hooks are above eye level and mounted on square frame top pipe to insure rigidity of brackets and prevent canting. Rack takes 12 mats.

No. 40 PORTA-WELD UNIFORM RACK. All-welded construction. Main frame is of 1 1/2" galvanized pipe, upper and lower bars, 1 3/8". Rack stands 6' high by 7' in length. Distance between upper and lower bars is 4'. Unit rolls on heavy rubber composition casters and is 28" wide.

No. 39 PORTA-WELD JR. BASEBALL BACKSTOP. Pat. No. 2,627,295. Illustrated with detachable, 3' brow extension (No. 39B). Front opening 10' wide, 9' high. Extra-heavy galvanized construction; built to last for years. Rolls on roller bearing, rubber-tired wheels. Rigid, for Long Island only. Knockdown model. (No. 39K) for shipment off Long Island.

No. 80W05 TWIN-SUPPORT, OFF-SET, OUTDOOR BASKETBALL BACKBOARD. Supports are 3" O.D. All welded bridge construction, upper section fits snugly into uprights. All fittings eliminated. Extra-sturdy throughout and will not vibrate. Comes in fan-shaped backboard in either steel or fiberglass (No. 80FB).

GENUINE LEATHER

"SLIP-ON GRIPS"

TO REGIP

GOLF CLUBS . . .

The world's greatest players say that genuine leather grips are essential to fine golf . . . always the right give and tackiness for a confident swing. Now, a golfer's favorite club can feel better than ever when worn grips are replaced with the sensational new Lamkin Leather "Slip-On" Grips! Hand wound, over tapered cork and rubber listings, these grips insure sensitivity and pliancy and new-club freshness. Uniform in size, they will always stay in balance. And they're so easy to install. These are true all-weather grips; they'll never crack or dry out. Lasting tackiness gives security against slip; torque is eliminated. A terrific item for golf and pro shops . . . Nine combinations of solid or alternating colors.

9 smart colors

ASK YOUR PRO!

money order

\$1.00
pod.

Wash your leather grips with a mild soap. Rub on CONTACT (in handy applicator pad) and renew original lac. CONTACT is absorbed by leather and will not coat grips. Also great for keeping golf gloves soft and tacky. CONTACT is an old proven formula (used in new grips) and is produced by the world's largest manufacturer of leather grips.

CUSTOM
COLOR

COVERS

ASK YOUR PRO!

Here's a style "birdie" for the golfer who demands a dash of individuality! Select your color preference — to identify his college, organization or country club. Numerals and design are process printed—in color to order—made from top quality cow hides, chemically treated to repel water. Designed to hug the club head contour, covers are fully flannel lined—each with sturdy metal swivel and leather draw cord. Available with personal club signature in gold.

ATHA-POWDER

Atha-Powder is the day-long foot deodorant you've always wanted! It dries, cools, soothes tired feet, without stain or pain, leaves a pleasant odor . . . and it combats recurrence of Athlete's Foot. Spill-proof container puffs powder just where wanted in shoes, hose, or on feet . . . easily, economically. Use effective, exclusive-formula Atha-Powder all year 'round . . . at home, away, at work or at play!

At drugstores only, 98¢

New Rubber Jumping Pits

At the USSR vs. USA track meet in 1958 the vaulters of both teams vaulted into a pit of GROUND RESILIENT RUBBER. Last winter the broad jumpers and high jumpers of both countries jumped into cork and rubber pits respectively at Madison Square Garden, upping the World's Indoor Records in both events. The Garden record in the vault also was broken.

These new vaulting and jumping pits were used also at the Boston Garden, New England, Philadelphia Inquirer Games, Heptagonals, Cleveland K of C, Chicago, Daily News and many dual meets in many conferences. The vaulters and jumpers agreed that this was a new and delightful experience. Here is a pit that is:

SAFER—practically eliminates the possibility of injuries on landing

REMOVES THE JAR—hence less fatiguing

DEPENDABLE—always in shape for there is no maintenance

Recommended depths are one foot for high jump and two feet for pole vault. The price is more expensive than wood shavings or sawdust, but the rubber pit is **PERMANENT** and **REQUIRES NO DIGGING OR OTHER MAINTENANCE**. The savings in labor and replacement will quickly justify the original investment.

"Imitation is the sincerest form of flattery." However, Olympia, the original developer of rubber pits, is by far the least expensive and most efficient.

Now! Ice-Pak any injury in just 2 seconds!

Remarkable new discovery!

NEW KWIK-KOLD INSTANT ICE-PAK.

Gives instant cold that lasts up to ½ hour! For sprains, swelling, bruises and minor bleeding. Helps minimize injury, speed recovery.

Doctors know that prompt application of cold is one of the most important first aid treatments for injury. And *how fast* cold is applied can often make the difference between days, and even weeks, of recuperation.

Now a new scientific discovery called KWIK-KOLD makes it possible for anyone—anywhere—to get the medical benefits of cold in a hurry!

New KWIK-KOLD Instant Ice-Pak gives you *instant cold* for any injury. Relieves pain on the spot—reduces swelling and minor bleeding. Much faster and handier to use than old-fashioned ice bags and, unlike ice, is always available, is not messy, is easy to carry on trips.

Quick and easy to apply. Just squeeze the plastic bag and—in just 2 seconds—you get instant cold that *stays cold* up to half an hour! The tough yet flexible plastic bag conforms readily to body contours. Non-toxic and safe, even if the bag is punctured. Keeps for extended periods of time.

Kwik-Kold provides ready relief for athletic injuries. Used by the 1960 U.S. Olympic Team, Kwik-Kold should be standard equipment for all football, basketball, and baseball teams as well as other athletic groups. For all sports injuries—sprains, black eyes, cuts and bruises—Kwik-Kold is handy and effective, indoors, outdoors, in all seasons.

New KWIK-KOLD belongs in the first aid kit of everyone who has to deal with sudden injuries. Get Kwik-Kold from your local first aid equipment supplier or write International Latex Corporation, 350 Fifth Avenue, New York 1, N. Y.

Kwik-Kold can be stored at any temperature, always ready for immediate use. Tough yet flexible plastic bag contains dry Cold-Crystals and an inner pouch of special fluid. When you squeeze bag, fluid is released to activate crystals and give *instant cold*. Apply as you would an ice pack. Bag measures 6" x 9", conforms smoothly to body contours, is not lumpy, messy, or drippy. Dispose of bag after use.

How Cold Works in the Treatment of Injuries:

Cold is medically recognized for its value in the treatment of various injuries. In *minor bleeding*, cold has an astringent action on tissues and constricts capillaries, thus acts to reduce blood flow at the site of the wound. By reducing effusion of blood to wound, cold helps reduce *swelling, inflammation, and discoloration* in bruises and sprains. The local anesthetic effect of cold helps *relieve pain*. And because it restricts blood flow to and from the wound, cold slows spread of venom in treating *insect and snake bites*.

How To Use Cold in Emergency First Aid:

Sprains. Elevate injured part to a comfortable position. *Apply cold packs* to sprain to ease swelling and relieve pain.

Bruises, Black Eyes. Apply cold pack promptly to bruise for 20 to 25 minutes. Cold inhibits flow of blood to wound, helps limit discoloration, reduce swelling and pain.

Bleeding. In bleeding from the nose, the head should be kept erect, as lowering the head tends to encourage continued flow of blood. *Apply cold* to the nose, and if the bleeding is from near the tip of nose, pinch the nostrils together for a few minutes. In bleeding from cuts and abrasions, keep the area raised and *apply cold* in conjunction with other prescribed treatment.

Insect & Snake Bites: For bee, wasp and hornet stings, remove stinger with sterilized needle or knife point. *Apply cold* to sting to relieve pain and slow absorption of venom. Apply calamine lotion to relieve itching. For ant, chigger and mosquito bites, wash affected parts with soap and water, then apply paste of baking soda. *Apply cold* to reduce swelling. For snake bite, follow prescribed first aid procedure, *using cold* application on wound to relieve pain and help limit spread of venom.

Sunstroke. For mild sunstroke (marked by headache, fatigue, dizziness and, perhaps, fainting), cool patient off quickly. *Apply cold packs* to head to help lower body temperature.

Minor Burns. Follow recommended first aid procedures to exclude air from burned area and prevent contamination. *Apply cold packs* to relieve pain.

Other Uses. Cold packs may be considered for use in conjunction with other appropriate first aid measures in treating minor head injuries, suspected appendicitis, headache and fever, toothache, and fainting.

VIOBIN

Wheat Germ Oil

- Helps the Heart . . .
- Gives more Endurance
- Vigor—Stamina

Athletes reach peak performance with VioBin Wheat Germ Oil

Glen S. Hummer, Swimming Coach, YMCA swimming team, Huntington, Indiana, states that VioBin Wheat Germ Oil helped his team win the National YMCA swimming and diving championship at Dayton, Ohio, April, 1960. The entire team was able to improve its second 100 yards performance, "showing a definite improvement in endurance."

Doctor T. K. Cureton trained six persons by exercise until they reached a point where they were unable to improve. Heart response and endurance were measured. After these tests, they were given 1 teaspoon of wheat germ oil daily for 6 weeks. Their heart action and endurance measurements doubled as a result of taking wheat germ oil.

Floyd Strain, Director of Track of the Clayton Valley High School, Concord, California, whose track team set a national championship record for the cross country track event for high schools, states: "VioBin Wheat Germ Oil was one of the chief reasons for our success."

Dr. James E. Councilman, Cortland State Teachers College, Cortland, New York, gave one teaspoon VioBin Wheat Germ Oil daily to one-half his track team; the other half one teaspoon refined cottonseed oil plus Vitamin E.

As a result of these tests, Dr. Councilman states: "The addition of VioBin Wheat Germ Oil to the diet of track athletes improved endurance and capacity of the heart to do work."

In 1956, the U. S. Naval Base, Key West, Florida, used the Underwater Swimmers in three matched groups for 6 weeks. Advantage (trends) was shown for the two groups on wheat germ oil and crystals of wheat germ oil. The "T" values were twice as large for the wheat germ oil and crystals groups compared to the cottonseed oil group. In 1958, similar results were obtained with an Underwater Demolition Squad over 14 weeks at the U. S. Amphibious School, Little Creek, Virginia.

REFUSE SUBSTITUTES. ONLY VIOBIN OIL PROVED EFFECTIVE. Send for folder 32

ORYL GARD

DESIGNED BY DENTISTS
AND COACHES FOR
POSITIVE PROTECTION

Oryl-Gard F (Lower)
Protective mouthpiece
for football

Oryl-Gard B (Upper)
Protective mouthpiece for
boxing and football

PAT. PENDING

There is NO ONE better qualified to fit your athletes with mouth guards than the man who devotes his professional life to the teeth... your dentist.

The new Oryl-Gard is a completely new, precise-fitting mouth guard, developed by a team of dentists.

Most fittings take about 5 minutes. The dentist places a preformed plastic shell over the athlete's teeth. He fills the shell with a fluid plastic. The athlete bites down on the shell while the material sets. Minutes later the dentist examines the "fit", and the job is done.

ADVANTAGES:

- Makes it easy to breathe—with mouth either open or closed.
- Will not fall out when the mouth is open.
- Completely comfortable to wear.
- Causes little or no difficulty in speaking.
- Protects the teeth better than any ordinary mouth guard known, since all teeth are in register. Offers protection against the straight front blow, and against the dangerous "upper cut" IMPACT.

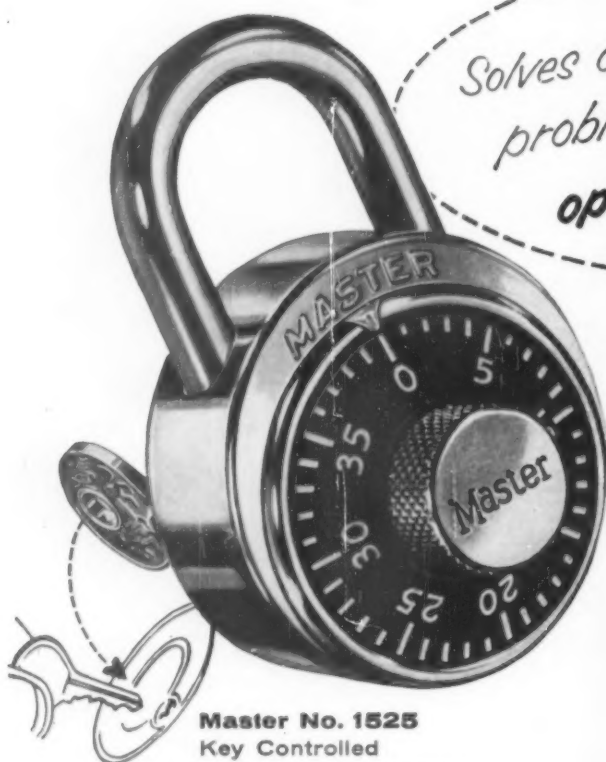

The dentists of America know and use Oryl-Gard Mouth Guard. Designed by dentists, fitted by dentists. Ask yours for information.

Master

COMBINATION PADLOCKS

Master No. 1525
Key Controlled
Two Year Guarantee

Master No. 1500
Same design and construction
as No. 1525...but without
key control

*Solves our locker room
problem... my control key
opens every padlock!*

Hundreds of coaches have eliminated their locker room security problems by installing MASTER Combination Padlocks. Ideal for use in humid locker rooms — cadmium rustproofed throughout. Low initial cost . . . no installation expense . . . easier administration . . . long-lasting, trouble-free service. Many superior MASTER construction features, such as stainless steel case, rugged steel locking latch, 4 pin-tumbler key control. Specially designed for rough school use. Write today for FREE brochure and prices.

Master Laminated Padlocks

Defensive Backfield Drills

(Continued from page 7)

Procedure: From basic position in squads of four, five yards apart, react to movement of ball, left, right, backward, and forward.

Coaching Points: Start from basic position. First reaction is a step back, then move in 45° angles, crossing over while watching passer. As direction of ball changes, plant the away foot and with proper hip and body balance push off planted foot in a shuffling manner to direction of ball.

The Interception Drill may be incorporated with this either in groups of four, as above, or on an individual basis using the same drill.

3. Mirror Drill (Body Reaction Drill), **Diag. 4.**

Same as Wave Drill, except that players mirror actions of coach and move in lateral pursuit instead of 45° angles. If coach drops off, then defender goes back also.

4. One-on-One Mirror Drill (Series of Techniques), **Diag. 5.**

Objective: To get proper position body reaction, planting procedure, and movement.

Procedure: Coach and manager, 40 yards apart, mirror one another's movements with a ball, as receiver follows movements of manager and defender follows those of coach.

Coaching Points: Start from basic stance—first reaction is backward step. Watch planting procedure and proper position and distance from receiver.

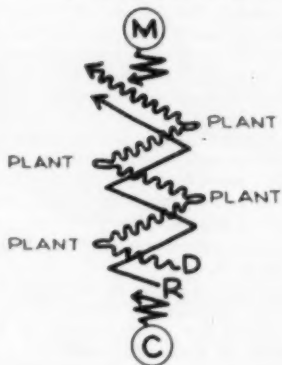

5. Coming In On Ball (Ball Reaction), **Diag. 6.**

Objective: To teach proper technique of intercepting ball.

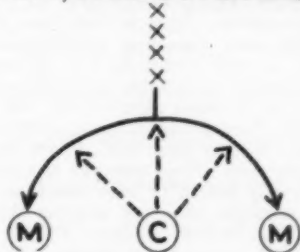

Procedure: Line up defenders one behind other. Have them begin slowly at first in approach. Coach throws ball high in air at or to either side of them. Defender intercepts and runs ball back to manager beside coach.

Coaching Points: Approach with balance. Get good timing to intercept ball at highest point, with thumbs pointed inward. Intercept and, if at all possible, go wide up field.

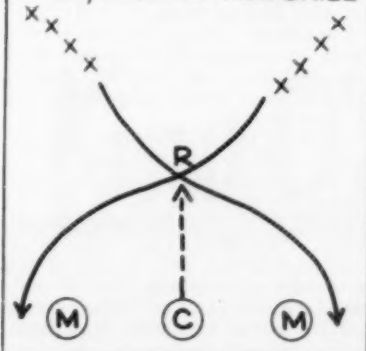

DIAG 5, ONE-ON-ONE MIRROR DRILL

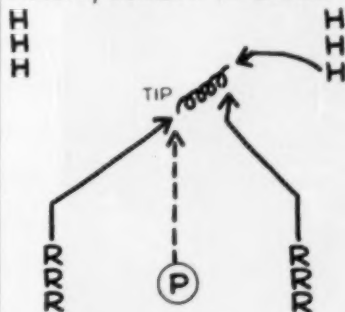

DIAG 6, COMING IN ON BALL

R-W FOLDING PARTITIONS

For classrooms

• Grace McWayne School, Batavia, Ill.
Architects, R. A. Orput, Rockford, Ill.

... auditoriums

• University of Pittsburgh, Pittsburgh, Pa.
Architects, Schmidt, Garden and Erickson, Chicago, Ill.

... gymnasiums

• Shadle Park High School, Spokane, Wash.
Architects, Culler, Gale, Martell and Norrie, Spokane.

BEST FOR THE \$

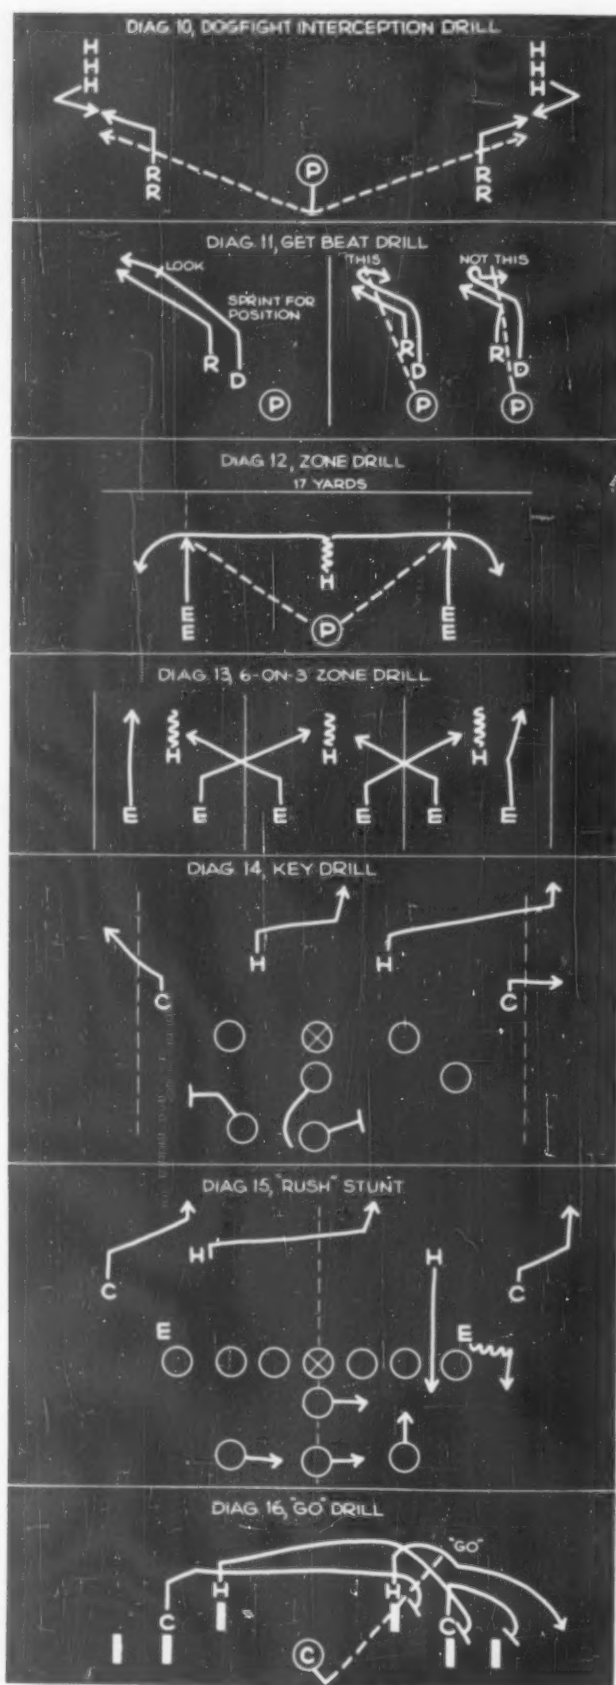

A few more dollars invested initially can save you hundreds in the future. In years to come the quality, rugged strength, trouble-free operation and excellent sound retarding qualities inherent in all R-W Folding Partitions will pay dividends through reduced maintenance and repair costs. Available in a type and size to meet your exact requirements. Economically and functionally it will pay you to buy the best—R-W Folding Partitions.

MANUFACTURING COMPANY
"FOLDING PARTITION DIVISION"
606 THIRD STREET • AURORA, ILLINOIS

6. Interception Drill (Ball Reaction), **Diag. 7.**

Objective: Same as Drill 5.

Procedure: Coach or passer throws at receiver facing him 25 yards away. Defenders in two lines come in to intercept from an angle. This can also be done with defenders coming straight across or laterally, to teach intercepting from all angles.

Coaching Points: Same as Drill 5.

7. Tip Drill (Ball Reaction), **Diag. 8.**

Objective: Reaction to ball.

Procedure: Same as **Diag. 7**, except receiver now tips ball—defender approaches for coverage, reacts to tip and intercepts.

Coaching Points: Good balance and control. Churning action of legs on tip—catlike action with spring and aggressiveness to intercept tip. Intercept and go inside if possible.

8. Combat Tip Drill (Ball Reaction and Conditioning), **Diag. 8.**

Objective: To react to ball. Learn to use body to ward off receivers in interception procedure.

Procedure: Two lines of receivers, two lines of defenders. Ball is thrown to receiver crossing over. Receiver tips pass—opposite receiver and defender fight for ball. Reverse procedure.

Coaching Points: Concentrate on ball. (Receivers can be sensed.) Go through receiver to ball—arms stretched out as far as possible, body as high as possible.

9. Combat Interceptions (Conditioning), **Diag. 9.**

Procedure: Coach in center. Defenders in groups of three, 15 yards away. Fight for interception as ball is thrown in their direction.

10. Dogfight Interception Drill (Position and Conditioning), **Diag. 10.**

Objective: To teach technique of playing through receiver to ball.

Procedure: Ends in two lines going down and breaking out. Defenders line up and cover. As ball is thrown on break-out angle, defender comes up and through receiver for ball.

Coaching Points: Be sure defender plays passer and ball. Have passer throw away from receiver at times to check if defensive man reacts to ball or whether he's just playing the receiver.

11. Get Beat Drill (Second-Effort), **Diag. 11.**

Objective: To teach pass defenders what to do in event a receiver does get deep behind them.

Procedure: Line up receiver several yards in advance of defender. Have passer throw long arching pass to receiver. Also throw behind him and to opposite side.

Coaching Points: We allow pass defensive men to sacrifice sight of ball for position any time a man gets deep behind them. When ball is thrown, they turn and sprint for position. When they feel this position is reached, they find path of ball. If ball is thrown on opposite side of their pass defensive angle on deep coverage and it's going well over their head,

CUSTOM BUILT ATHLETIC EQUIPMENT • RIVER GROVE, ILL.

NEW EQUIPMENT

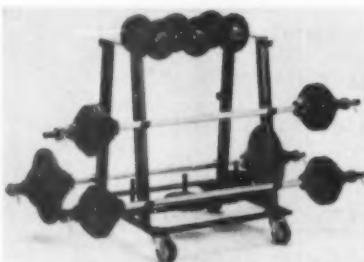

For full details on any or all of these products, check the respective listings under "NEW EQUIPMENT" in the master coupon on page 47.

• **MINUTE-GYM.** This home exerciser is guaranteed to increase strength rapidly and to firm entire musculature in just one minute a day of easy, safe, sensible body conditioning. Provides resistance of heavy poundage at any height. Comes with exerciser program.

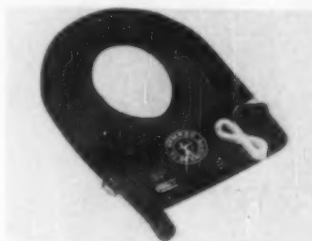

• **TRAMPOLINE SPRING.** Available on American trampolines, these new cadmium-plated springs resist rust and corrosion on outdoor units. Interchangeable with other brands of springs.

• **PORTABLE BARBELL RACK.** Leflar's all-welded steel rack has strong flat oval tubing uprights, and rolls easily on heavy duty ball-bearing swivel casters with rubber tread.

• **SUPER-HAILER** is a one-piece, waterproof 16-watt output megaphone capable of projecting clear speech over a mile. All-aluminum, transistor-powered, 6 lbs., 16" overall, two-tone green with baked enamel finish. (Audio Equipment Co.)

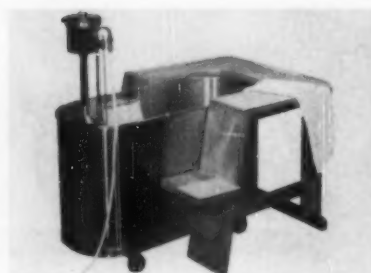

• **SAFETY FLOAT.** When activated, the Nemrod rubber float brings skin diver up at safe rate of ascent, keeping him afloat with positive buoyancy while supporting his head. Impervious to heat, sun, oil, and mildew.

• **SPEED PACK TAPE.** Consists of 32 rolls 1½ x 15 yds., stacked in 8 convenient 6" high columns. Permits trainer to wrap two ankles with one roll. Produced by Johnson & Johnson.

• **FOOTBALL HAND PROTECTORS.** Worn as easily as gloves, the Grid Thomas protector furnishes complete protection for linemen and backs. Features tough ensolite pads encased in nylon elastic webbing. Washable, eliminates protective hand bandaging.

• **WHIRLPOOL TABLE.** Built of 1½" northern elm planking, the School Health Supply Co.'s custom-built table will hold a ton in weight and is finished with a waterproof lacquer.

• **TENNIS BALL.** Wilson's new Extra Duty Championship T1020 features a special "wool" cover of nylon and dacron that roughs up and renews itself as it is played. Especially designed for hard-surface courts.

COACHES' CORNER

Please send all contributions to this column to Scholastic Coach, Coaches' Corner Dept., 33 West 42 St., New York 36, N. Y.

ONE of the Dodger wives, much in need of a day off from her household chores, farmed out junior to hubby on an open date in the schedule. That evening, when junior and daddy returned, she asked what kind of time they had had.

"Just great, mommy," enthused junior. "We went to the zoo—and one of the animals won and paid \$22.80."

The ump wasn't very experienced. When the runner came into the bag in a cloud of dust, he called him safe. Then, observing that the runner had overslid the bag, he made a quick change, putting his right hand up but keeping his left down in the original "safe" signal.

The runner looked up perplexedly, then asked, "Mister, which hand means what it says?"

From *Baseball Digest*: "Baseball is a game in which the young man who bravely strikes out for himself receives no praise for his enterprise."

At the time Don Drysdale was popping off about wanting to be traded from the Dodgers vice-president Buzzy Bavasi called the sulking pitcher on the phone. The phone rang several times before Don's wife, Ginger, answered.

"I'm sorry it took me so long to answer," she apologized. "I was bathing the baby."

"Which one?" Buzzy asked.

In a game against the Cubs, Ralph Kiner smacked a colossal homer to tie the score. When the pitcher, Bob Muncrief, got back to the bench, Manager Frankie Frisch asked him what kind of pitch he threw.

"A real good curve ball. He hit a good pitch."

"Well, forget about that pitch and throw him fast balls next time," ordered Frankie.

The next time up, with two men

aboard, Kiner made his first homer look like a bunt by sending a fast ball completely out of the park.

Muncrief, back on the bench, looked at his manager. "Well, brains," he murmured, "he hit *yours* a whole lot further than he hit mine."

When Babe Herman, the great-hit no-field former Dodger, heard that someone was making the round of the night clubs, stores, etc., impersonating him, he had a ready solution to apprehending the rascal.

"Next time anyone comes around and claims he's Babe Herman," he advised, "take him outside and fungo a ball to him. If he catches the ball, call the cops."

Manager Charlie Dressen had removed the famous eccentric, Frank Gabler, from the mound, and the Great Gabbo's pride was injured. Stripping off his shirt, flexing his mighty biceps, and pounding his bosom, Gabler pleaded: "Look Charlie, I'm in great shape. I never felt better."

"Listen," replied Dressen. "I don't want you to fight anyone for me. I just want you to get somebody out."

When Hank Aaron came up to bat in the first inning of the 1958 World Series, Yogi Berra, the Yankee catcher, noticed that the trademark on the bat was down.

"Say, Hank," said Yogi, "you don't want to break that bat. Better turn it around so you can read the trademark."

"Yogi," Aaron grunted, "I didn't come up here to read."

Bob Bauman, the former trainer of the Giants, was a great practical joker. One day after a hard workout, Johnny Mize came into the clubhouse drenched with perspiration. He took off his sweatshirt and went to get a drink of water. Bauman promptly soaked the sweatshirt with alcohol. When Mize returned, Bauman asked him how he felt.

"Tired but good."

"Better stay away from that hard stuff, though, John. That's what really

gets you," Bauman kindly said.

"What do you mean, hard stuff? I only had a couple of beers and was in early last night."

"Oh yeah," replied Bauman. "Don't kid me. Look." He dropped a match on the sweatshirt and up it went in flames. "That's alcohol you sweated out, John!"

Mize grabbed for the shirt. "Doc, Doc," he pleaded, "don't say anything about this to anyone."

When Herb Score really had it, he threw just about as fast as anyone who ever lived. One day Roy Sievers stepped in against him, and it was buzz, buzz, buzz—three quick strikes. Roy strolled to the dugout, politely put his bat into the rack, and sat down. "He threw me that radio ball," he announced.

"Radio ball?" asked Chuck Stobbs.

Sievers looked up. "You can hear it, but you can't see it."

Pitching against Ernie Banks, Vinegar Bend Mizell kept shaking off the catcher. Finally the backstop walked out and muttered, "You're gonna have to throw him something. Why don't you pitch?"

"Let's wait a while," the lefty replied. "Maybe he'll get a long-distance call."

Moose Skowron smashed the ball down the right-field line, and Rocky Colavito made a great try for it. He took a long sitting-slide, but just missed the ball. As luck would have it, he landed on the ball and couldn't find it. Everyone in the park—except Rocky—knew he was sitting on it.

In front of the Indian dugout, screaming like a banshee, was Manager Joe Gordon. "For God's sake," he kept yelling, "somebody tell him to get off the ball before he hatches it."

A rhubarb erupted in the seventh inning, and Jimmy Dykes—as usual—rushed onto the field. With three umpires huddled around him, he stated his case and, as usual, lost. Walking back to the dugout, he spotted the fourth ump, Jocko Conlan, and appealed to him.

"But Jimmy," pleaded Jocko, "I don't even know what this is all about."

Dykes pointed to the other ump. "Then join them, they don't know what it's all about either."

Yogi Berra last year opened a bowling alley and, as a get-acquainted stunt, gave away free the first two days' bowling. His affluent manager, Casey Stengel, chided him on his lack of business acumen.

"I'm a bank director in California," observed Stengel. "What do you think would happen if I opened my bank and let the customers help themselves for a couple of days?"

"It's not the same thing," snapped Berra. "Bowling balls are tougher to get past the guards than money."

**"He went down . . . but he
DIDN'T GET HURT!"**

The track is paved with

**PERMA
TRACK**

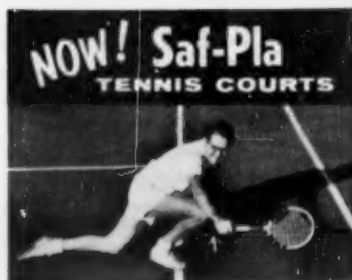

**. . . the "all-weather" rubberized
track paving designed to
ELIMINATE INJURIES from FALLS.**

Princeton, West Point, Villanova, Boston, Ohio,
Miami, C. W. Post College and many other Uni-
versities, High Schools and City Athletic Fields
have already made installations.

COACH HANK SCHOELLES WRITES: "... Williamsville (N. Y.)
Central High School recently installed Perma-Track in the runways
for the broad jump and pole vault as well as the high jump approach
... our squad was very fond of the surface. They found that rubber
gave them surer take offs than spikes on loose cinders ... was very
easy on their legs and seemed to give them greater spring ... regard-
less of the weather, our approaches were constantly firm with no slips
or slides ..."

Developed as Saf-Pla in 1952, this all-weather rubber surface was
first used for play areas around swings, slides, etc. and was so success-
ful in preventing injuries that it readily expanded to applications
such as tennis, basketball, and handball courts. Then Saf-Pla was used
to protect the ankles of horses at race tracks, and its ability to stand
up to severe punishment was proven. It was logical to use it for field
event approaches and running tracks where these qualities were
needed. Coaches find that in practice session their athletes can use
cross-country flats on Perma-Track and obtain the same friction as
spikes on cinders. In meets, the surface stands up to the spikes beau-
tifully. The lines are permanent, maintenance is nominal, and meets
can be held even in the rain! Write for complete details.

In case of a fall, Saf-Pla
gives the player protec-
tion in action, it's far
more comfortable under-
foot and lends good
bounce to the ball. In
addition, its ruggedness
during foul weather re-
duces maintenance to a
minimum.

REACTION DRILLS

MOST people are unaware that football is a game of movement. To be successful, the offense must be able to quickly cross the point of attack; while the defense must be able to react immediately and lend instantaneous support to the point where the ball crosses the line of scrimmage.

Very few teams who run, block, and tackle with great speed lose football games.

Unless a player has quick-starting speed, his effectiveness will always be limited. The coach must remember this about football speed: Except in a few positions, it isn't measured in raw terms; that is, by how fast a man can run 50 to 100 yards. The true measure of football speed is *quickness in an immediate area*.

To develop a squad's immediate speed in all the fundamental areas, the coach must work on reaction drills every day. At Greenwich High, we use 16 reaction drills, incorporating three into every practice session.

Our objective each day is to start a little faster than the previous day. Unless you conscientiously endeavor to start faster each time, you won't improve your immediate speed.

Our starting count is "Ready, Set." We begin each drill by saying "Ready," and the group replies with "Set." This instills discipline and esprit de corps into the drills.

Our 16 reaction drills are organized and administered as follows:

WAVE DRILL: Organize three lines in groups of threes, as shown in **Diagram 1**.

The coach assumes a post four yards in front of the lines, while the players set up in good football position. At the command right or left—which the coach gives with a motion of the respective hand—the players move laterally.

When the coach signals forward or backward with his hands, the players move in the respective direction.

At the final hand signal, the group

sprints past the coach and reforms behind him. The coach then turns around and reinstitutes the drill.

It's essential for the players to always keep their heads up, their feet moving, and their movements as quick as possible in the indicated direction.

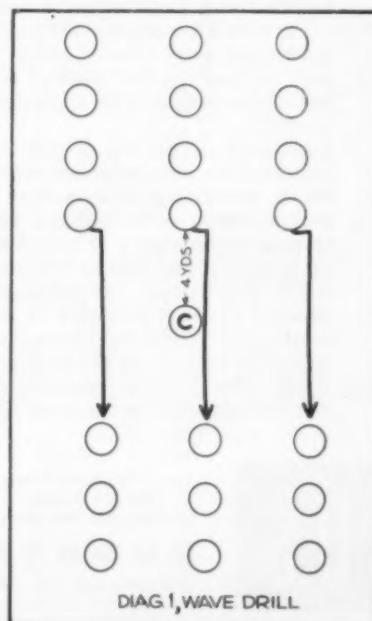

GRASS DRILL: Organize the same as the Wave Drill.

The players assume a good football position, and on the coach's hand signal run in place. At the next hand signal, the players dive into a prone position, then immediately rise to their standing position. They then sprint past the coach and regroup behind him.

The drill teaches players to hit the ground and immediately bounce up into good football position, ready to run, block, or tackle.

SCRAMBLE DRILL: Organize the same as the Wave Drill.

This drill is done on all fours. The players fall onto their hands and feet and crab laterally and forward with short, choppy steps. They must keep their head up, back straight, and but-

toes down, with feet spread about the width of the shoulders—knees kept bent about two inches off the ground.

In moving laterally, the player must coordinate his feet and hands to project all movement forward, backward, or laterally in either direction. The purpose of this drill is to teach players to move quickly and low after being knocked down by a block, or to continue a drive after slipping off a block.

DIAG. 2, FOLLOW THE LEADER

FOLLOW THE LEADER: Organize the same as the Wave Drill.

As shown in **Diag. 2**, the players assume a good football position facing the leader. The latter confines himself to lateral movement, and the players cue from him—moving parallel with him each time.

The leader is permitted to do a forward roll while moving forward; and when he does, the players must follow suit.

At the completion of the drill, the leader throws the ball on the ground to simulate a fumble, and one of the players following the leader must recover it. This drill teaches reaction to a ball-carrier, and recovering a fumble while in pursuit of him.

EVASIVE DRILL: Two lines face each other, one consisting of backs and the other of linemen (**Diag. 3**). The first back receives the ball from the coach, and attempts to evade the lineman.

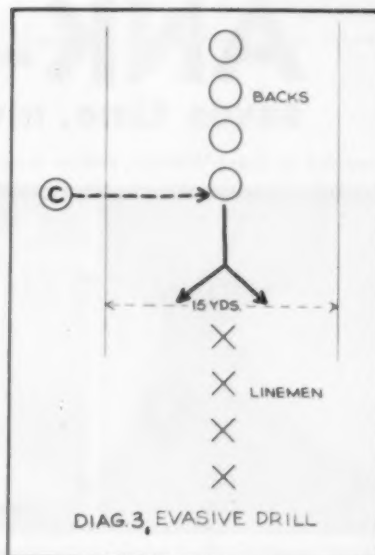

The latter sets up between the two restraining lines in a good football position, and tries to tag the ball-carrier with the heels of both hands. A manager can keep score as an added incentive.

FORWARD ROLLS: Organize the same as the Wave Drill.

Players start with a quick, low drive, literally rolling rather than diving into the drill. The initial shock is taken up by the hands, as the palms touch the ground. The waist, elbows, and shoulder joints give, in order, to cushion the impact.

From the arms, the weight is next caught on the lower dorsal end of the neck. At this point, the player buckles his body by bringing his knees, which must be kept together, into his mid-section. As he rolls, he transfers his weight down his back to his buttocks.

He grasps both ankles with his hands and gives an additional tuck and pull to create the necessary mo-

mentum to pull him up on his toes and in position to move quickly in any direction. The completion of the drill finds him in control of his body in a good football position, sprinting past the coach.

SHOULDER ROLLS: Organize the same as the Wave Drill.

The player begins the same as for the forward rolls, always making sure to remain low enough so as to roll rather than dive into the stunt, thus avoiding injuries.

The impact is first broken by the right or left forearm, depending upon what side the roll is being executed. From the forearm, the weight is transferred to the back side of the shoulder—the head being kept to the side opposite the shoulder that's taking the shock, preventing any possibility of injury.

As the weight is being transferred down to the buttocks, the player bends his leg (on the side he's rolling) to a bent-knee position. The body gets its upward spring as the leg uncoils simultaneously with the forward momentum of the body. The opposite leg is extended so the player can come up on it in position to start moving forward.

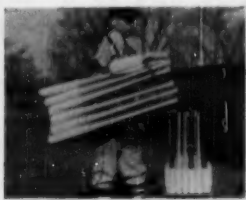

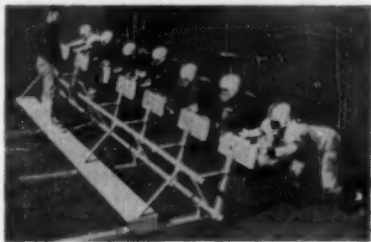

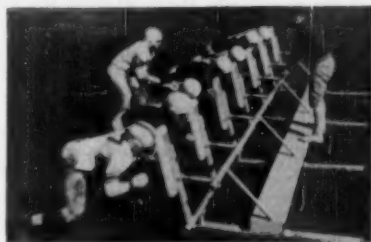

At the completion of the roll, he gets into good hitting position and sprints past the coach.

DUCK WALK: Organize the same as the Wave Drill.

This drill shouldn't be considered a duck waddle. The player moves forward in a crouch equivalent to a three-quarter knee bend (good football position), walking on the balls of his feet at about quarter speed. He must keep his feet shoulder-width apart and move them straight ahead at all times. The arms keep pumping to maintain momentum for a quick drive upfield.

This affords good practice in running low in position to block or tackle up and through an opponent. The players start slowly and accelerate rapidly on each step, bursting into a

sprint in the final five yards.

RUNNING FORWARD: Organize the same as the Wave Drill.

This drill is like running in place, but with the player moving forward for five yards. He must raise his knees as high as possible and pump his arms as forcefully as possible. The body assumes a slight forward lean, and the head is kept up at all times.

The drill should also be done on the balls and toes of the feet. It helps teach players to run with a high knee action on their toes rather than their heels.

RUN AND GRAB: Organize the same as the Wave Drill.

The players assume an offensive stance. On a hand signal, they sprint forward at top speed. At the next signal (a whistle), they reach down and grab at the grass, trying to snatch a handful while running at top speed. Immediately after grabbing, they get under control and keep running—on the alert for the next signal.

After each whistle, the players must alternate the grabbing hand. The completion of the drill is signalled by a short double whistle. This drill is excellent for teaching body control.

RUN AND TURN: Organize the same as the Wave Drill.

The players assume an offensive stance and sprint forward at the coach's hand signal. At the next signal (a whistle), they make a 360° turn at top speed and return to their original position. A short double whistle completes the drill.

RUNNING THE LINE: This drill embodies the same principles as Running Forward, except that the players go backwards. Running backwards is an art: You must turn your knees out to one side and run, not back-pedal.

KNEE VAULTS: Organize the same as the Wave Drill.

The players assume a position on both knees. At the coach's signal, they explode into an upright position. This action exercises the power muscles in the lower back.

LEAP FROG: Organize the same as the Wave Drill.

The players are allowed to take four leaps for distance from a three-quarter knee bend, doing them one after another with maximum effort. The arms must be used vigorously for additional momentum, and the explosion should come from the driving extension of the knees and a spring forward from the balls and toes of the feet.

A good addition to the Leap Frog Drill is to have partners leaping over each other into a forward roll, then gathering immediately and sprinting past the coach.

MONKEY ROLL: Organize the same as the Wave Drill.

Divide the entire group into threes and have them lie in prone position facing the coach. At the starting command (a whistle), the middle man rolls either left or right. Whichever man he rolls toward must elevate his body and roll toward the other outside man who's now in the middle.

This drill is an excellent fun drill

with which to precede contact work.

GOOD FOOTBALL POSITION: Organize the same as the Wave Drill.

Players assume a good football position. At the coach's hand signal, they execute a three-quarter turn as indicated by the coach. They continue these turns, stressing good football position after each, until the completion. This is an excellent introduction to instruction on good football position.

CARIOCA: Players form a single horizontal line facing the coach. They move laterally along a straight line with a cross-over step motion. Going to the left, you start with the right foot in front of the left. Then you take a side step with your left foot, and follow with the right behind the left, then back again with the side step with the left and the right foot in front, etc.

This drill is done on the balls and toes of the feet for a distance of 20 yards. As the player moves sideward, he keeps his arms out to the side parallel to the ground, and uses an exaggerated hip swing in crossing his feet in front and then back. Especially good for developing coordination, balance, and quickness.

NONPAREIL'S RECTANGULAR

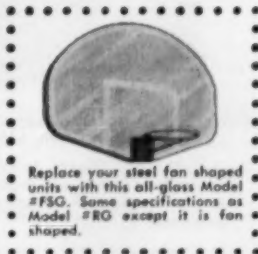

TEMPERED ALL-GLASS BACKBOARD

MODEL #RG

Meets all NBA, college and
high school specifications

**Can be mounted in most 4' x 6' swing-up
frameworks or rigs—WITHOUT ANY ALTERATIONS!**

This new Nonpareil backboard will satisfy every requirement you want in a Rectangular All-Glass backboard installation. The superior quality tempered glass, cushioned with vinyl molding between the framework and the glass is set in an extra heavy welded and bolted steel frame assembly. This type of mounting, exclusive with Nonpareil, eliminates all need for cross bracing. Our Model #RG Unit (shown above) is quickly and easily installed on any regulation 4'x6' wood backboard swing-up rig or framework. Mounting brackets are permanently bolted to frame and equipped with key-hole slots—permitting greater latitude and adjustment when mounting backboard. Backboard border and center target are outlined in brilliant white vitreous enamel, will never wear off from ball contact.

Replace your steel fan shaped units with this all-glass Model #RG. Same specifications as Model #RG except it is fan shaped.

Blocking for Outside Belly

(Continued from page 9)

control on the offensive guard by the manner in which he lines up on the guard—on the outside shoulder. Secondly, if the linebacker is a tough boy with good reactions, the guard will never be able to keep him to the inside on this particular play; so any help that the guard can get is welcomed.

This adjustment keeps the linebacker out of the fullback's running lane, and tends to quickly cut down to size the exceptional linebacker.

Blocking Adjustment # 2 (Diag. 3). All offensive linemen carry out their regular blocking rule, with the right halfback once again being the only player to make any special adjustment. He double-teams the (2) man with the right tackle.

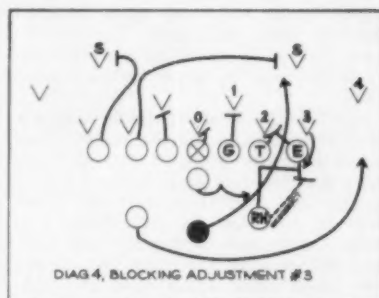

DIAG 3, BLOCKING ADJUSTMENT #2

The latter blocks (2) with his outside shoulder, thus giving the defensive tackle the impression he's being blocked to the outside. While the defensive tackle is fighting against this pressure and trying to get to the inside, the right halfback hits into him with his inside shoulder, driving him down the line and opening up the off-tackle hole for the ball-carrier.

This is an excellent adjustment to use when your offensive tackle is badly out-manned by the defensive tackle. Once again you're cutting people down to size.

Blocking Adjustment # 3 (Diag. 4). All offensive linemen carry out their regular rule blocking except the right end, who double-teams the (2) man along with the offensive right tackle. As the offensive tackle and end drive (2) down the line, the right halfback runs straight ahead to a point behind the offensive tackle and turns-out on (3) in an L-shaped path, funneling him to the outside.

By running this L-shaped path before blocking (3), the right halfback can make sure the defensive

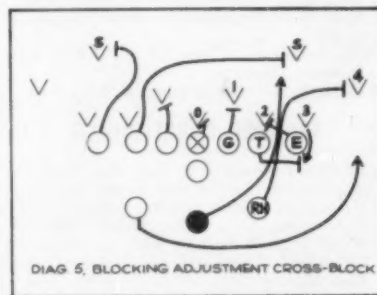

DIAG 4, BLOCKING ADJUSTMENT #3

end doesn't get into the fullback's running path. If the defensive end is able to shed the right halfback quickly, the very nature of the right halfback's position will still prevent the defender from making the tackle before the fullback can get through the hole.

If the right halfback were to run right at the defensive end, instead of running the L-shaped path, the end would then be able to shed the blocking right halfback much easier and get in front of the ball-carrier before the fullback could get through the hole. (The broken line illustrates the improper path for the right halfback to take in approaching the defensive end.)

This adjustment also helps soften up that tough defensive tackle. The right halfback's block actually is a trap-type of block, which helps open up that all-important off-tackle hole.

DIAG 5, BLOCKING ADJUSTMENT CROSS-BLOCK

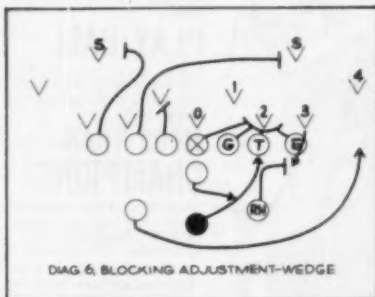

Blocking Adjustment Cross Block (Diag. 5). In this adjustment, all players follow their basic rule blocking except the right end and the right tackle. At the snap, the right end fires-in on the (2) man, driving him down the line of scrimmage. The right tackle drop-steps with his right foot and moves off the tail of his right end, driving (3) to the outside.

This creates a hole off-tackle as big as the outdoors, and gives the right halfback plenty of room to go

through the hole and get good position on (4), who's his normal blocking assignment.

Blocking Adjustment Wedge (Diag. 6). In this crude, yet effective, adjustment, the active side guard, tackle, and end form a three-man snow-plough.

The tackle is the apex of the wedge, as he fires-out straight ahead downfield with both "flippers" held high and wide. The right guard fires his outside, or right, "flipper" hard up into the back of the right tackle's left "flipper," while the right end fires his inside, or left, "flipper" hard up into the back of the right tackle's right "flipper."

As the three men run downfield at full speed in snow-plough fashion, the guard and end keep *punching their "flippers" hard up into the back of the tackle's two "flippers."* This technique of "punching up the tackle's flippers" is a great aid in keeping the wedge together and moving at full speed.

The center joins the inside of the wedge to cut off any defensive player trying to come in from the inside to get behind the wedge, while the right halfback goes after the first defensive player to the outside of the wedge.

The remainder of the backfield action is typically the same, except that the fullback hits in a little tighter and much quicker than usual. The quarterback doesn't give the customary belly ride hand-off, but gets the ball to the fullback as fast as possible after the snap.

The fullback tries to get his forehead on the back of the tackle's pants in order to follow in behind the apex of the wedge as closely as possible. Although the fullback's head is kept low while running behind the wedge, his face must be kept up, so that when the wedge does eventually break up the fullback can break for daylight.

This adjustment is basically a short-gaining technique. But it does often go for a long-gainer. Wedge blocking is highly effective against stunting or penetrating techniques. There's nothing quite as shocking,

HEAD FOOTBALL COACHES

Does your team scout bring back the "info" to help you win? Make accomplished scouts of your assistants with **Coaching Aids — a new SCOUTING MANUAL with GAME-BREAKDOWN FORMS.**

With the aid of this unique Scouting Manual, your staff members can return from their scouting assignments with an exact statistical record of the game. Complete in every detail, this new scouting tool has been developed to fulfill all your coaching needs. It requires a minimum of actual writing and is extremely versatile. T Formation, Single Wing, and other special offensive formations are handled with equal ease. The manual includes a wide variety of Scouting Charts and Game-Breakdown Forms, all of which facilitate your personal use of the report. You needn't use all of these charts, but they're there if you want them.

Here are a few of the many features that are included:

- Designed for a single scout
- Extra thick backing for easy writing
- Complete in itself, nothing else needed
- Scout all formations with equal ease
- Over 60 pages of special game forms
- Over 50 full pages of diagrams
- Hundreds of pertinent questions to guide the scout
- Record entire game with a minimum of writing
- Affords a permanent file from year to year
- Ample recording room on each page

or frustrating, for a defensive line-backer than to find himself red-dogging into a wedge.

It pretty closely parallels running into a snow-plough at full speed, and nothing will discourage defensive stunting any faster than wedge blocking at the critical point of attack.

We feel that this type of wedge blocking is a great aid to team morale, for the guard, tackle, and end aren't blocking any specific defensive player. They're blocking as a unit, which is moving downfield and pushing aside anything in its path.

Adjustments, as described in this article, are an absolute necessity to the outside belly series whenever the defense is containing the basic rule blocking techniques.

Training Recruits in Cross-Country

(Continued from page 18)

jog 150 yards; walk 150 yards. (Repeat until a total of 1200 yards has been covered.)

3rd day—repeat work-out of second day.

4th day—5 minutes of calisthenics; stride 200 yards; walk 200 yards. (Repeat until a total of 1600 yards has been covered.)

5th day—8 minutes of calisthenics; stride 400 yards; walk 200 yards. (Repeat until a total of 1800 yards has been covered.)

6th day—8 minutes of calisthenics; stride 600 yards; walk 200 yards (repeat twice); jog 300 yards.

7th day—8 minutes of calisthenics; stride 800 yards; walk 200 yards. (Repeat twice.)

8th day—10 minutes of calisthenics; stride $\frac{3}{4}$ mile; walk 200 yards; stride 400 yards.

9th day—10 minutes of calisthenics; stride a mile; walk 200 yards; stride 400 yards.

10th day—10 minutes of calisthenics; stride $1\frac{1}{2}$ miles; walk 200 yards; stride 300 yards.

A few important things should be kept in mind in connection with these work-outs. The beginner's group should work together at all times. That means during the calisthenics, the running, and even the walking. The walking should immediately follow the running and vice versa.

By the time the prescribed walking distance has been completed, all members of this group should be more or less abreast and should move as a unit into the next portion of the running. For at least the first 10 work-outs the pace shouldn't rise above half speed with no sprinting at the end of any of the running segments.

By the 11th work-out, the locale may be shifted to the cross-country course, as a challenge. The calisthenic drill

should precede the running. This group should still be kept intact. They must be impressed with the idea that the hill-and-dale type of running will be of greater benefit in building stamina than running on level ground.

For the first cross-country practice session, the course should be subdivided into two or three segments. Since most high school cross-country courses are from 1½ to 2½ miles in length, the longest segment should be about ¾ mile. Half speed running or striding should still be the guiding principle. As for the hills, have everyone walk the first ¾ of each hill and stride through the latter part.

After this work-out has been repeated three times, it would be well to have the segments rearranged so that each will include running about half of the hills in their entirety. After three more such work-outs, the course may be divided into two parts. Have the members of this group stride half the length of the course, walk 200 yards, and stride the remainder of the distance. Continue this practice procedure for three sessions.

By this time, enough curiosity should have been aroused among the members of this group as to whether they can last the full course. It would be well to have the decision to try to go the route come from the group. If the boys feel they're ready, they'll make an all-out effort to complete the entire cross-country course without a stop. This would be the supreme challenge.

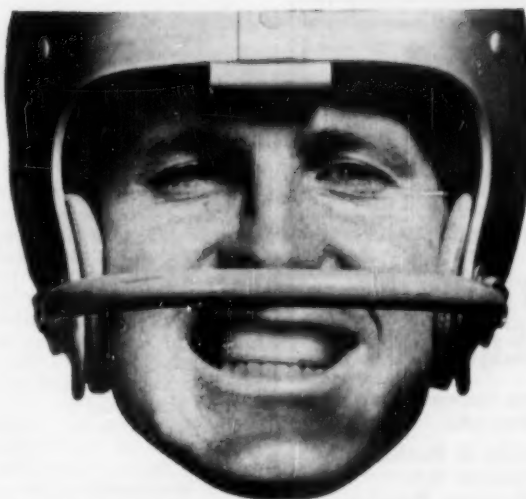

Once the full course has been traversed, the first major objective will have been achieved. From that point on it will be only a matter of increasing the pace gradually until a practice run can be attempted, with the time of each runner recorded.

The next logical step would be to arrange a practice handicap meet with the varsity. This can be done on a time basis, allocating handicaps so that all contestants will theoretically finish at the same time, if they perform according to their last timed practice session.

The procedures outlined in this article are practical. They've withstood the test of usage in one form or another by many of our better coaches. In the case at hand, they've been slightly modified to meet the needs of the green participants.

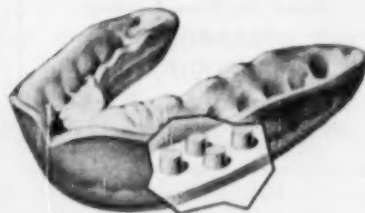

If applied with reasonable judgment, they should be helpful in developing an inexperienced group into some semblance of a cross-country team. At any rate, they should prove beneficial to all concerned, whether they make the cross-country team or not.

Upon being appointed head coach of the N. Y. Giants, Allie Sherman immediately announced that he intended to restore the man-in-motion series to the Giants' attack—prompting Kyle Rote to murmur, "Maybe we won't win many games in 1961, but we'll be sure to have at least one man in great condition."

PLAY SAFE... PREVENT COSTLY MOUTH INJURIES

THE LATEST DEVELOPMENT IN DENTAL PROTECTION, SHIELD Mouth Guard was designed in cooperation with coaches and trainers to eliminate dental injuries in contact sports. SHIELD is a light, strong plastic guard that is custom-fitted to the mouth without professional assistance. SHIELD'S exclusive design allows free breathing and speaking—does not slip or fall out.

- Easily custom-fitted in 7 minutes
- Made of pure hospital vinyl
- Tasteless, odorless, can not absorb mouth acids
- The most comfortable, yet most protective mouth guard available
- SHIELD Mouth Guard fully complies with the recent ruling of the National Alliance Football Rules Committee

Exclusive Shock-Absorber Design !

The illustrated projections insure perfect fit and give teeth an extra cushion against shock. Strong, efficient, completely comfortable. Retail price \$3.50. School price \$2.50. Money-back guarantee. Order SHIELD Mouth Guard from your Sporting Goods dealer, or Roberts Dental Manufacturing Company, Inc. 1075 Main St., Buffalo 9, New York.

Multi-Stage Passing Action

(Continued from page 14)

cess through the flooding of the outside area with three potential receivers. The near halfback, after executing the quick toss maneuver, continues in a swinging pattern that culminates in a sprint directly upfield. With the defensive halfback taking the deep driving flanked end, this receiver should open. If the deep receiver isn't covered, a long completion should follow.

Defensive rotation should up difficult unless an over-compensation is made to the split side. This situation would consequently free other areas. The quarterback should base his decision upon the commitment of the defensive halfback. Pressure would force an immediate pass to the swinging back.

A maneuver of this type, to be successful, should be complemented with thrusts to the inside that are very similar in appearance. This would tend to minimize defensive pursuit. Immediate and aggressive pursuit would obviously ruin this action's effectiveness. The blocking of interior linemen in this situation is magnified in importance. Blocking must be fast and sure, with contact maintained for a sustained period of time.

The following are tentative individual assignments:

Set End to Split-Side Tackle: Drive out straight ahead or according to specified rule and block assigned defender aggressively. Blockers located to the split side must attempt to turn their man toward the center; the block of the tackle is extremely important. The key to this sequence lies in the ability of these blockers to eliminate pursuit.

Split End: Operate the break-in pattern. If the quarterback fakes the pass, break deep back to the sideline as illustrated in **Diag. 5**.

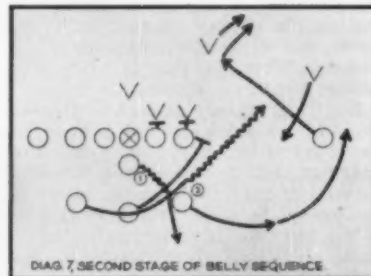

Near Halfback: Swing laterally at top speed, ready to receive the ball at any time. If the quarterback doesn't toss the ball immediately, execute a swinging pattern to the outside and continue this pattern directly upfield. The ball can be thrown at any time, from the moment the ball is put into play until this receiver is 30 yards deep. Always be ready to cut back and block for the running quarterback.

Fullback: Drive directly off-tackle, block the first man outside the offensive tackle. Contact must be made and maintained. If, for some reason, no defender is located in this area or there's no penetration, hold up at the line of scrimmage and block the first penetrator to enter the area.

Far Halfback: Drive laterally to the split side, cut upfield to a point one yard outside the offensive tackle. This pattern should take five steps to the point where the pivot is made toward

the line of scrimmage. As the break toward the line is made, position the arms to receive the ball from the quarterback.

If the ball is inserted, take it and drive off the fullback's block as illustrated in **Diag. 7**. If the ball isn't inserted, drive upfield to a point six to eight yards deep and pivot back toward the quarterback, being ready to receive a pass immediately or block back for the running attempt. This pattern must stay to the inside. If this isn't possible, block anyone available at the scrimmage line.

Quarterback: Upon reaching the line of scrimmage, survey the defensive alignment. If the arrangement is to the inside, the quick toss should be considered. If it's to the far outside, the break-in pass should be considered. Or, if a definite weakness is noted off-tackle, the second stage should receive consideration.

As the ball is centered, retreat at a 30° angle to the split side. Be prepared to execute the first stage at any time. If this doesn't develop, give consideration to the second stage.

Success is possible here if defensive pursuit doesn't occur and the area is free. Simply hand the ball to the belying halfback as he passes. If there's any problem here, keep the ball and continue your path in a roll-out action. Note the action downfield. Key the secondary defender. Pass to the optimal receiver. Usually the swinging halfback will be free.

The ball can be kept for a running attempt if advantageous. The quarterback should utilize this possible run to force defensive reaction to it and thus open short-patterned receivers.

The 49ers mastodon, Leo Nomellini, was becoming increasingly annoyed at the elbows being thrown at him by the opposing tackle. Finally he blew his top. Rising to his full height, he looked the culprit square in the eye and snapped:

"Look, Mr. 78, if you want to play rough, okay. But remember, you're a good-looking guy, but me, I've got nothing to lose."

Defensive Backfield Drills

(Continued from page 26)

we allow them to turn completely with back to ball to create a better interception angle. (We've found you get to deep ball quicker this way.)

12. **Zone Drill (Ball Reaction), Diag. 12.**

Objective: To teach coverage of a zone area.

Procedure: On marked off area 17 yards wide with defender in middle, he must cover both ends and react to direction of thrown ball.

Coaching Points: Watch passer first—ends with split vision.

13. **Six-on-Three Zone Drill (Ball Reaction), Diag. 13.**

After two interchanging periods of individual techniques, about eight to 10 minutes with each group, we work in full units for about 10 minutes.

Our Unit Pass Defensive Drills are:

1. **Key Drill (Position Drill), Diag. 14.**

Objective: To get directional movement and field position.

Procedure: Full backfields on defense. Start from basic position. React back on first step. Rotate on predetermined key. Coach or passer either drops straight back or flows one way or other. Have field lined off.

Coaching Points: Check interception distance on a whistle. Move ball around on hash marks. Don't allow outside men any closer than four yards from sideline.

Diagram shows straight drop-back action key and rotation flanker. Vary ball position and keys to check assignment, direction, and field position. Offensive ends are put in to get proper alignment.

Since we stunt in the secondary with maneuvers which include our defensive ends, we must use them in our pass defensive unit drills at times. (See my article in May issue.)

In **Diag. 15**, key is to "ball" (rotate that way). Stunt called is "Rush." Every key and stunt maneuver must be covered and from various field positions.

2. **"Go" Drill (Coordinated Techniques and Interception Returns), Diag. 16.**

Objective: To teach blocking potential receivers after an interception.

Procedure: Dummies are placed in defensive secondary. After a quick reaction to a coach's pointed direction of ball, ball is thrown in one of defensive zones. Defenders put blocks on dummies nearest receiver.

Coaching Points: When interceptor yells "go," nearest defensive back blocks receiver. Other defensive backs move to ball and on "go" command, block in on next opponent nearest interceptor. (We try to block in because our interception returns are planned with an outside lane formed by both the backs and linemen.)

At times some drills are improvised a little, but ordinarily we stick very close to the drills as diagrammed. It goes without saying that our tackling drills are incorporated into our defensive practice procedure. Our purpose here, however, was to cover just our pass defensive drills and techniques.

A final word of caution about all drills: They should yield as much fun as possible without sapping the players' vitality.

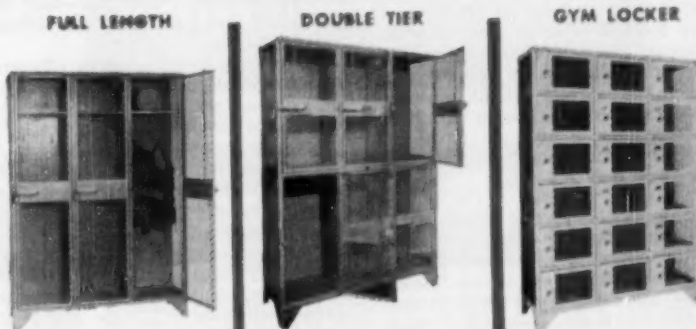

As George Allen says in his *Complete Book of Winning Football Drills*: "Do not drill the individuality or initiative out of the players. The player should be encouraged to control the drill himself. The real stars . . . have generally been men who drilled themselves to a high degree of excellence."

"Under no circumstances must the drill or the drillmaster dominate the player. If that occurs, motivation vanishes . . . The player must be encouraged to control the drill and to rise above the coach and coaching. In this manner only is high individual excellence obtained."

"The importance of carefully planned and skillfully organized drill cannot be overestimated. It is the secret of good performance."

A New Football Book! . . .

1st and TEN

This new book is written by Hugh Duffy Daugherty, Head Football Coach, Michigan State University and Clifford B. Wilson, 2nd, Associate Professor, Department of Health and Physical Education, State University of New York, Teachers College at Brockport.

1st AND TEN provides a functional foundation for the student of modern football. It is written for the prospective High School Physical Educator and the college student who anticipates making coaching his career. It is a valuable source of reference material for new and all coaches alike.

The book in its entirety is organized as an instructional sequence of material which takes the reader from the fundamental beginning of the game to its strategic climax. Fundamental practicality has been maintained throughout the book. Through a detailed account of various aspects of football, it will help the coach become more self-sufficient.

The approach to team play is unique in that it not only gives an overview of modern football offenses, but, in addition, breaks football offense down into basic fundamental parts. This type of approach to team play should make it possible for the imaginative coach to be able to devise his own particular offense rather than merely copying that of someone else.

This valuable book, abundantly illustrated, has complete chapters on The Game of Football, Individual Fundamental Play (General), covering Stance, Blocking, Tackling, and Fumble Recovery, Individual Fundamental Play (Backfield), Part I Offense and Part II Defense, Individual Fundamental Play (Line), Part I Offense and Part II Defense, Fundamental Offensive Team Play (Backfield), covering Backfield Maneuvers, Fundamental Offensive Team Play (Line), Formation Alignments and Offensive Line Maneuvers, Getting the Ball Into Play, Popularly Used Offenses, Team Offensive Play (The Running Game), Team Offensive Play (The Passing Game), The Kicking Game, Team Defense, Scouting, Strategy and Administration, plus a Valuable Index to make the book usable as a source of ready reference.

1st AND TEN contains a wealth of experience and knowledge. There are 256 pages, over 300 illustrations and diagrams and is beautifully cloth bound and sells for only \$5.00.

New Books on the Sport Shelf

- **1ST AND TEN.** By Duffy Daugherty and Clifford B. Wilson. Pp. 228. Illustrated—photos and diagrams. Dubuque, Iowa: Wm. C. Brown Co.

DESIGNED to meet the pressing need for a comprehensive instructional football text, *1st and Ten* provides a functional foundation for the instructor and student of modern football. Duffy and his collaborator, head coach at Brockport (N.Y.) State Teachers College, have done a splendid job of analyzing the game from the fundamentals of blocking and tackling to the myriad offensive and defensive team patterns and strategies.

After limning the history and rules of the game, they plunge right into the individual general fundamentals of stance, blocking, tackling, and fumble recovery. Next they describe the fundamentals of backfield play—passing, receiving, punting, place-kicking, and ball carrying—and the individual line fundamentals (offense and defense).

Then the authors analyze offensive team backfield and line play, numbering systems, popularly used offensive formations (including the current favorites—Winged T, Slot T, Tandem T, and Double Winged T)—the running game, the passing game, the kicking game, team defense, scouting, strategy, and administration.

The book is magnificently organized, excellently written, and highly authoritative. A handsomely mounted large-sized book (11" by 8½"), it's extremely well-illustrated with both sequence photos and large, sharp diagrams.

While prepared specifically for instructors and students, it can be read with enormous benefit by every active coach—junior high, senior high, and college.

- **MODERN ATHLETIC TRAINING.** By Ken Rawlinson. Pp. 208. Illustrated. Englewood Cliffs, N. J.: Prentice-Hall, Inc.

THE distinguished Oklahoma and Olympic Team trainer presents a training program that can be adopted in toto by high school coaches who must do their own training, by student trainers, and by both young and veteran trainers.

No stone bruise is left unturned. Clearly and thoroughly the author presents a complete program, under the following headings:

Make-up of the training room; conditioning; practice routines; the game weekend; athlete's diet; types of injuries and their general treatment; taping and bandaging, treating skin injuries, stopping bleeding; foot and ankle care; lower leg, knee, and thigh

conditions and injuries; groin, pelvis, buttocks, back; abdomen and chest; neck, face and head; shoulder, arm, elbow and hand; rehabilitative exercises of specific area injuries; miscellaneous problems; administering a massage; artificial respiration methods; contagious diseases; and specific problems related to basketball, baseball, track.

Illustrated nicely with photos, skeletal charts, and drawings, the book constitutes a handy, all-inclusive, and well-illustrated guide to modern athletic training methods.

- **TRAMPOLINING ILLUSTRATED.** By Chuck Keeney. Pp. 149. Illustrated. New York: Ronald Press Co. \$4.

SUPERVISOR of physical ed and former gymnastics coach at the U. of California, as well as one of the country's top trampolining authorities, Chuck Keeney offers a safe, fun, and professionally technical analysis of 50 popular trampoline stunts.

Each is described clearly, its learning process described step by step, its common errors corrected, then is topped off with extra helpful tips. All this excellent instruction is dovetailed with a photo sequence of the stunt.

The stunts fall into five categories: easy combinations and twists, forward somersault group, advanced knick-knacks, backward somersault group, and twisting somersaults. Presented in progression for ease in learning and safety in performance, the book is a boon to both performers and instructors.

- **TREATMENT AND PREVENTION OF ATHLETIC INJURIES.** By Joseph P. Dolan. Pp. 472. Illustrated. Danville, Ill.: The Interstate Printers & Publishers. \$5.50.

PUBLISHED originally in 1953, this book received such wide acclaim and usage that the author, a physical education professor at Northeast Missouri State Teachers College, was urged to revise it in keeping with the latest trends.

The result is practically a new book. Completely up-dated, with 90 extra pages, many new illustrations and a brand new chapter on "Mental Hygiene in Athletics and Training," the book is packed with all of the latest information and techniques that trainers and coaches must know to fully dispatch this critical responsibility. The scope of the book may be gleaned from the chapter headings:

Mental hygiene; massage; massage for specific injuries; the foot and ankle; the shin, knee, and thigh; the shoulder, arm, and hand; the chest

and abdomen; the back; the skin; the head and face; drugs, dressings, and physical therapy agents; nutrition for athletics; psychology and the trainer; and guidance in training.

The author covers his subjects clearly, simply, and extensively, excellently integrating the principles of anatomy, physiology, and kinesiology.

- **ARNOLD PALMER'S GOLF BOOK.** Pp. 142. Illustrated. New York: Ronald Press Co. \$5.

IN simple, concise language, the great golf champion explains an approach to the game that can produce remarkable results both for the duffer and experienced golfer.

He cuts the game to its essentials, beginning with his overlapping grip. Then he shows how to work for maximum performance through mastery of the stance and swing from tee to green.

Ten series of large sequence photos illustrate Palmer's swing for a variety of shots, from driving off the tee to the wedge pitch and blasting out of sand.

Nicely spiced with anecdotes of many of his key shots in tournament play, the book offers a thoroughly professional guide to par and sub-par golf.

- **PROGRESSIVE WEIGHT TRAINING.** By Jack R. Leighton. Pp. 143. Illustrated. New York: Ronald Press Co. \$4.

EVERYONE interested in body development and conditioning through weight training—and who isn't these days—will find this well-organized, well-written, well-illustrated, and comprehensive text of great practical value.

Written by the chairman of the physical ed department at Eastern Washington College, it offers a full program of progressive resistive exercises for men and women of all ages.

In addition to the actual exercises, the author also offers excellent chapters on facilities and equipment, conduct and evaluation of the exercise programs, special exercises and specialization, and weight lifting.

The author clearly knows his field and how to put it across to the uninitiated.

Miscellaneous

- **Mechanics of the Pole Vault** (4th Edition). By Dr. Richard V. Ganslen. Pp. 140. Fayetteville, Ark.: Richard V. Ganslen. \$1.50. (The greatest book on the pole vault extant, written by the world's greatest authority on the event, this book covers the vault in incredible detail, omitting absolutely nothing. Illustrated profusely, it's a positive must for every performer and coach.)

- **Administration of Health, Physical Education and Recreation for Schools.** By Richard C. Havel and Emery W. Seymour. Pp. 440. New York: Ronald Press Co. \$5.50. (Integrating the ad-

ministrative interrelationships among these three basic areas, this sound, comprehensive volume provides an extensive analysis of the responsibilities for personnel, budget, facilities and equipment, and for program development and evaluation.)

• **School Health Organization and Services.** By Clair V. Langton, Ross L. Allen, and Philip Wexler. Pp. 441. New York: Ronald Press Co. \$6.50. (Designed for health and physical education students, this text presents an authoritative overview of the total health program, showing how the services of people and agencies can be coordinated for maximum results.)

• **The Theory of Play and Recreation** (3rd Edition). By Allen V. Saporin and Elmer D. Mitchell. Pp. 558. New York: Ronald Press Co. \$5.60. (A basic textbook which gives the student a background in the history and significance of the play and recreation movement, and guides him in planning and implementing a community program.)

• **Methods and Materials for Secondary School Physical Education.** By Charles A. Bucher, Constance Koenig, and Milton Barnhard. Pp. 387. Illustrated. St. Louis: C. V. Mosby Co. \$6.50. (A large, superb text on how physical ed teachers may most effectively conduct dynamic programs in junior and senior high schools, replete with a large splendid index containing field and court layouts, tournament drawings, test and achievement forms, equipment forms, check lists, skill forms, and other types of helpful materials.)

• **Posture and Figure Control Through Physical Education.** By Blanche J. Drury. Pp. 95. Illustrated—drawings. Palo Alto, Calif.: The National Press. \$3. (A large, solidly authoritative text for students and instructors offering in simplified form an understanding of the problems involved in developing and maintaining good posture and figure control.)

• **Highlights of the Olympics.** By John Durant. Pp. 160. Illustrated. New York, N. Y.: Hastings House. \$3.95. (A handsome, absorbing account of the Olympics' greatest moments from ancient times to the present.)

• **Kranz Manual of Kinesiology** (4th Edition). By Clem W. Thompson. Pp. 159. Illustrated. St. Louis: The C. V. Mosby Co. \$3.75. (An extensively revised and enlarged edition of one of the classic manuals on kinesiology.)

• **Sports Illustrated Library: Book of Football, Book of Baseball, Book of Skiing, Book of Small Boat Sailing, Book of Horseback Riding, Book of Dog Training.** Pp. 80-90. Illustrated. Philadelphia: J. B. Lippincott Co. \$2.95 each. (Prepared by the editors of Sports Illustrated, where the material originally appeared, these extremely handsome word-and-picture lessons cover the fundamentals of the sport clearly if not too thoroughly. The drawings are positively superb.)

"Here Below"

(Continued from page 5)

knocked us out of our swivel chair.

Dixon was needling Senator Allen J. Ellender's book, *Ellender's Travels*, for such sensational revelations as: "In the Netherlands, the canals are filled with water" . . . "The largest city in Turkey is Istanbul" . . . "Ambassador (to Poland) Jacob D. Beam and his wife are very fine people" and "Czechoslovakia is a landlocked state"—when it happened, just like this:

"(Senator Ellender) reveals . . . that the U. S. Information Agency library in that center of literary culture (Khartoum) subscribes regularly to *Humpty Dumpty's Magazine* for Little Children, *Hoosier Farmer*, *Arizona Highways*, *Down-Beat*, *Jack and Jill*, and *SCHOLASTIC COACH*!" (The capital letters and exclamation point are ours.)

After our shock wore off, we sent Mr. Dixon a note informing him that we didn't mind being lumped with *Humpty Dumpty* and *Jack and Jill*, but that our appearance in the Khartoum library makes a lot of sense.

Aren't sports one of the greatest mediums for fostering international amity, and aren't most foreign nations avidly interested in American coaching know-how? So why isn't it perfectly natural that they subscribe to *Scholastic Coach*, the best technical sports publication in the world?

The sun never sets on our readership empire. *Scholastic Coach* is read in France, England, Egypt, Russia, Germany, Italy, Sweden, Israel, Czechoslovakia, most of South America, Australia, and at least two dozen other countries. Again and again, coaches returning from State Department hegiras tell us that foreign coaches practically read the print off every issue they can lay hands on.

We don't know exactly how Khartoum can make use of *Humpty Dumpty*. But we know darn well they can get a helluva lot out of *Scholastic Coach*.

FREE SPORTS CALENDAR

MASTER LOCK'S handy sports calendar is again being offered free to coaches and athletic directors. The 18½" x 24½" wall chart offers a day-by-day breakdown of the 1961-62 school year, with ample space after each date to record future events. You may obtain this calendar through your athletic goods wholesaler or by writing to Master Lock Co., Dept. B, Milwaukee 45, Wis.
